Kechev, M. & Ivanova, M.: New records and list of known species of the family Dolichopodidae (Diptera, Empidoidea) from Croatia. Nat. Croat., Vol. 24, No. 2, 323–330, 2015, Zagreb

Two dolichopodid species (*Rhaphium caliginosum* Meigen and *Medetera jacula* (Fallén)) are recorded for the first time in Croatia. With these new data the total number of dolichopodid flies in Croatia is 38, which are listed here.

Key words: Croatia, Dolichopodidae, *Rhaphium caliginosum*, *Medetera jacula*, biodiversity

Kechev, M. & Ivanova, M.: Novi nalazi i popis vrsta porodice Dolichopodidae (Diptera, Empidoidea) za Hrvatsku. Nat. Croat., Vol. 24, No. 2, 323–330, 2015, Zagreb

Dvije vrste dugonogih muha (*Rhaphium caliginosum* Meigen i *Medetera jacula* (Fallén)) zabilježene su po prvi puta za Hrvatsku. S tim nalazima ukupni broj vrsta dugonogih muha za Hrvatsku iznosi 38 te rad donosi popis tih vrsta.

Ključne riječi: Hrvatska, Dolichopodidae, *Rhaphium caliginosum*, *Medetera jacula*, bioraznolikost

INTRODUCTION

The family Dolichopodidae is one of the largest families of the suborder Brachycera (order Diptera) with more than 7400 representatives from all over the world (PAPE *et al.* 2009; GRICHANOV *et al.*, 2011).

The dolichopodid fauna of Croatia is poorly investigated and majority of records are from the second half of the 19th and in the first half of the 20th century. STROBL (1900) published a book for the territory of Bosnia, Herzegovina and Dalmatia and listed 20 dolichopodid flies from Croatia (Dalmatia). Some new dolichopodids were described from Croatia as well. MIK (1889) described *Sciapus [Psilopus] lesinensis* Mik, 1889 from Lesina Island, Dalmatia (now Hvar Island). PARENT (1927) described *Lamprochromus dalmaticus* Parent, 1927 from Dubrovnik (Ragusa) and afterwards in 1932 the same author described *Sciapus oldenbergi* Parent, 1932 from Učka Mountain (Istria). PARENT (1938) mentioned eight dolichopodids distributed in Croatia (Dalmatia).

More recently, POLLET (2011) in the Fauna Europaea database listed several dolichopodids and the total number of species for Croatia raised to 36.

MATERIAL AND METHODS

The additional material was collected by sweep net from two different sites in Croatia (Fig. 1) – an irrigation canal in the town of Križevci ($46^{\circ} 00' 14''$ N $16^{\circ} 32' 16''$ E, 121

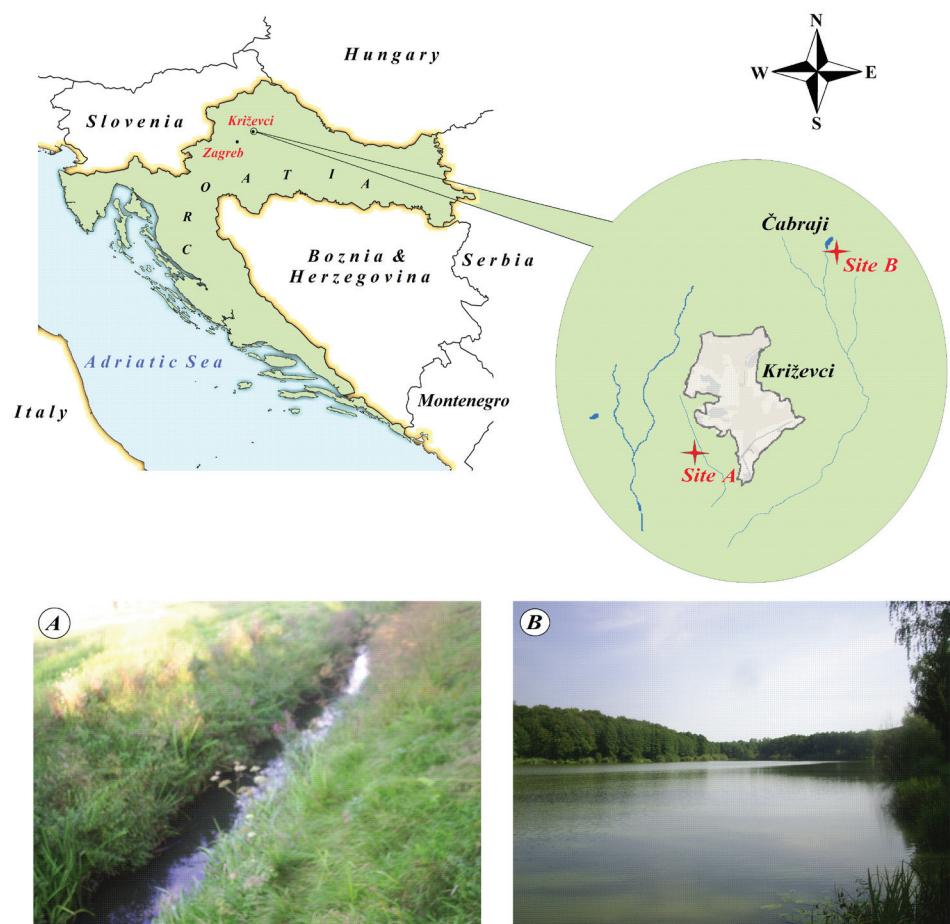

Fig. 1. Map of Croatia with collecting sites – Site A. Irrigation canal in the town of Križevci, Site B. Reservoir Čabralji (drawing and photos M. Kechev).

m a.s.l.) and the Reservoir Čabralji ($46^{\circ} 05' 46''$ N $16^{\circ} 35' 07''$ E, 165 m a.s.l.) near the village of Čabralji.

Diptera collected in the field were placed in 70% ethanol. Specimens were sorted in the laboratory using a Konus 5420 Diamond microscope. Identification keys by PARENT (1938), NEGROBOV & STACKELBERG (1969), GRICHANOV (2007) were used for the identification of the species new to Croatia.

RESULTS

The following format is used for the literature records given below: name of the site (citation of reference); and for new records: Croatian province, name of the site, the sampling date, number of sampled specimens per sex, collector.

Subfamily DIAPHORINAE**Genus Argyra Macquart, 1834**

1. *Argyra argyria* (Meigen, 1824)

Croatia (POLLET, 2011);

Genus Chrysotus Meigen, 1824

2. *Chrysotus cupreus* (Macquart, 1827)

Croatia (POLLET, 2011);

3. *Chrysotus palustris* Verrall, 1876

Croatia (POLLET, 2011);

4. *Chrysotus suavis* Loew, 1857

Dubrovnik (Ragusa) and Split (Spalato) (STROBL, 1900);

Subfamily DOLICHOPODINAE**Genus Dolichopus Latreille, 1796**

5. *Dolichopus plumipes* (Scopoli, 1763)

Croatia (POLLET, 2011);

6. *Dolichopus signifer* Haliday, 1832

Dubrovnik (Ragusa) (STROBL, 1900);

7. *Dolichopus strigipes* Verrall, 1875

Ston (Italian: Stagno; near Dubrovnik (BECKER, 1889) (as *D. aratiformis*); Dalmatia (Croatia) (PARENT, 1938);

Genus Hercostomus Loew, 1857

8. *Hercostomus chetifer* (Walker, 1849)

Island Hvar (Lesina, Dalmatia) (STROBL, 1900);

9. *Hercostomus fuscipennis* (Meigen, 1824)

Istria (Croatia) (PARENT, 1938);

10. *Hercostomus longiventris* (Loew, 1857)

Dalmatia (Croatia) (PARENT, 1938);

11. *Hercostomus lorifer* Mik, 1878

Croatia (Dalmatia) (PARENT, 1938), (POLLET, 2011);

12. *Hercostomus vivax* (Loew, 1857)

Croatia (Dalmatia) (PARENT, 1938), (POLLET, 2011);

Genus Ortochile Latreille, 1809

13. *Ortochile nigrocoerulea* Latreille, 1809

Dubrovnik (Ragusa), Zadar (Zara) and Split (Spalato) (STROBL, 1900) Dubrovnik, Dalmatia (Croatia) (PARENT, 1938), Croatia (POLLET, 2011);

Genus Sybistroma Meigen, 1824

14. *Sybistroma inornata* (Loew, 1857)

Dubrovnik (Ragusa) (STROBL, 1900); Croatia (Dalmatia) (PARENT, 1938; POLLET, 2011);

Subfamily HYDROPHORINAE

Genus *Aphrosylus* Haliday, 1851

15. *Aphrosylus piscator* Lichtwardt, 1902

Croatia (POLLET, 2011);

16. *Aphrosylus venator* Loew, 1857

Dubrovnik (Ragusa) (STROBL, 1900);

Genus *Hydrophorus* Fallén, 1823

17. *Hydrophorus praecox* (Lehmann, 1822)

Croatia (Dalmatia) (STROBL, 1900);

Genus *Machaerium* Haliday, 1832

18. *Machaerium thinophilum* (Loew, 1857)

Croatia (POLLET, 2011);

Genus *Thinophilus* Wahlberg, 1844

19. *Thinophilus flavipalpis* (Zetterstedt, 1843)

Zadar (Zara), on the sea shore (STROBL, 1900);

20. *Thinophilus ruficornis* (Haliday, 1838)

Croatia (Dalmatia) (STROBL, 1900);

Subfamily MEDETERINAE

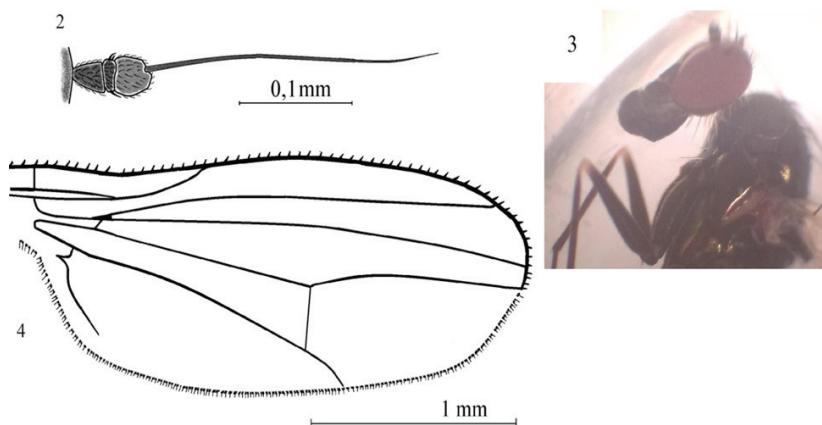

Genus *Medetera* Fischer von Waldheim, 1819

21. *Medetera diadema* (Linnaeus, 1767)

Zadar (Zara) (STROBL, 1900);

22. *Medetera flavipes* Meigen, 1824

Zadar (Zara) (STROBL, 1900);

Figs 2-4. *Medetera jacula* (Fall.), male: 2. antenna; 3. head, thorax and fore legs; 4. wing; (photo to and drawings M. Kechev).

23. *Medetera glauccella* Kowarz, 1877

Dubrovnik (Ragusa), on the sea rocks (STROBL, 1900), Croatia (Dalmatia) (PARENT, 1938); Croatia (POLLET, 2011);

24. *Medetera jacula* (Fallen, 1823) New to Croatia. Figs. 2-4.

Material examined: Koprivnica-Križevci County, on the banks of the Reservoir Čabradi, 31.VIII.2014, 1♂, 1♀, leg. M. Kechev.

25. *Medetera micacea* Loew, 1857

Croatia (Dalmatia) (STROBL, 1900);

26. *Medetera truncorum* Meigen, 1824

Šibenik (Sebenico) (STROBL, 1900), Croatia (POLLET, 2011);

Genus Systemus Loew, 1857

27. *Systemus bipartitus* (Loew, 1850)

Croatia (POLLET, 2011);

Genus Thrypticus Gerstaecher, 1864

28. *Thrypticus bellus* Loew, 1869

Dubrovnik (Ragusa) (STROBL, 1900);

29. *Thrypticus smaragdinus* Gerstacker, 1864

Croatia (POLLET, 2011);

Subfamily NEURIGONINAE

Genus Neurigona Rondani, 1856

30. *Neurigona nubifera* (Loew, 1869)

Dubrovnik (Ragusa) (STROBL, 1900);

Subfamily PELOPOEODINAE

Genus Micromorphus Mik, 1878

31. *Micromorphus albipes* (Zetterstedt, 1843)

Šibenik (Sebenico) (STROBL, 1900);

Subfamily RHAPHIINAE

Genus Rhaphium Meigen, 1803

32. *Rhaphium caliginosum* Meigen, 1824 New to Croatia. Figs. 5-7.

= *Rhaphium zetterstedti* (Parent, 1925)

Material examined: Koprivnica-Križevci County, Križevci, irrigation canal, 30. VIII.2014, 1♂, leg. M. Kechev.

Subfamily SCIAPODINAE

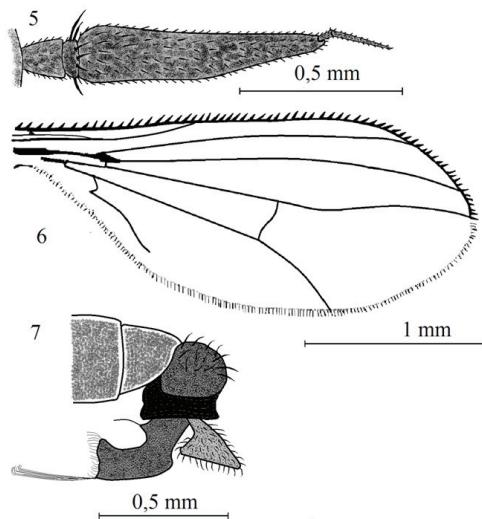

Genus Sciarpus Zeller, 1842

33. *Sciarpus contristans* (Wiedemann, 1817)

Dubrovnik (Ragusa) (STROBL, 1900);

34. *Sciarpus lesinensis* (Mik, 1889)

Island Hvar, Croatia (Lesina, Dalmatia) (MIK, 1889);

Figs 5-7. *Rhaphium caliginosum* Meig., male: 5. antenna, 6. wing, 7. hypopygium; (drawings M. Kechev).

35. *Sciapus oldenbergi* Parent, 1932

Učka Mountain (Istria) (PARENT, 1932);

36. *Sciapus pallens* (Wiedemann, 1830)

Island Hvar, Croatia (Isl. Lesina, Dalmatia) (STROBL, 1900); Croatia (POLLET, 2011);

Subfamily SYMPYCNINAE

Genus *Lamprochromus* Mik, 1878

37. *Lamprochromus dalmaticus* Parent 1927

Dubrovnik (Ragusa) (PARENT, 1927); Croatia (POLLET, 2011);

Genus *Syntormon* Loew, 1857

38. *Syntormon pallipes* (Fabricius, 1794)

Dubrovnik (Ragusa), Island Hvar (Island Lesina) and Zadar (Zara) (STROBL, 1900).

DISCUSSION AND CONCLUSION

In 1889 BECKER published a new species from Dalmatia – *Dolichopus aratiformis*, synonym of *Dolichopus strigipes* Verrall 1875. Checking the current literature about the distribution of Dolichopodidae (POLLET, 2011; GRICHANOV, 2014), the authors gave *D. strigipes* as doubtful for Croatia. Having in mind that BECKER gave clear description of the species and drawing of the hypopygium of *D. strigipes* (described as *D. aratiformis*), we consider this species is present in the fauna of Croatia and we added it to the list of known species.

These new data increase the number of known dolichopodid species for the fauna of Croatia to 38.

ACKNOWLEDGEMENTS

The present paper is dedicated to the senior author's great grandfather Jacob Mihailov Shtrok (1900 – 1948) who was born in Zagreb, Croatia. Thanks are due to all scientists and lecturers from Agricultural College in Križevci (Croatia). The visit to Croatia was supported by the grant of the European program "Erasmus +".

Received May 7, 2015

SUMMARY

New records and list of known species of the family Dolichopodidae (Diptera, Empidoidea) from Croatia

M. Kechev & M. Ivanova

In the present paper we give information about two new dolichopodid flies (*Rhaphium caliginosum* Meig. and *Medetera jacula* Fall.) in the fauna of Croatia. A list of 36 species belonging to 18 genera were known for Croatia until now (*Argyra argyria*, *Chrysotus cupreus*, *Ch. palustris*, *Ch. suavis*, *Dolichopus plumipes*, *D. signifer*, *D. strigipes*, *Hercostomus chetifer*, *H. fuscipennis*, *H. longiventris*, *H. lorifer*, *H. vivax*, *Ortochile nigrocoerulea*, *Sybistroma inornata*, *Aphrosylus piscator*, *A. venator*, *Hydrophorus praecox*, *Machaerium thinophilum*, *Thinophilus flavipalpis*, *Th. ruficornis*, *Medetera diadema*, *M. flavipes*, *M. glaucella*, *M. micacea*, *M. truncorum*, *Systemus bipartitus*, *Thrypticus bellus*, *Th. smaragdinus*, *Neurigona nubifera*, *Sciapus contristans*, *S. lesinensis*, *S. oldenbergi*, *Sciapus pallens*, *Lamprochromus dalmaticus*, *Micromorphus albipes*, *Syntormon pallipes*). With these new data the total number of known Dolichopodidae species for Croatia increases to 38.
