BOOK REVIEW

IDENTIFYING AND TREATING BLOCKAGES TO HEALING, by Beate Strittmatter. Bibliography 2003, 257 pages, 150 illustrations, soft cover. € 44.95 / CHF 74.50 ISBN 3 13 127871 4

The handbook entitled Identifying and Treating Blockages to Healing by Beate Strittmatter, M.D., is a practical publication of a complementary medicine, which emphasizes one common problem in daily medical practice, i.e. that some patients seem to be resistant to treatment despite all therapeutic efforts. Quite often the key to solving this health problem is finding and treating a focus, a harmful influence that interferes with the body system of self-regulation (e.g., bacterial inflammation, knotted-knee, scar tissue). In conventional medicine, the search for such foci usually begins when symptoms have already set in. However, this method of identifying the focus by means ofactive acupuncture points in the reflex zones of the ear is an eye-opener for the therapist; it allows for finding the foci before they have caused noticeable symptoms.

In Part A of the book, many of these potential foci are described. From a tooth with inflamed pulp to skin scars, there are various conditions that may cause pathophysiologic changes as well as disturbances at a higher level, the energy level. Here, we have to refer to the ancient wisdom of traditional Chinese medicine, which is based on the assumption that there is a so-called life energy or Qi, which moves through the body along the specific pathways called meridians (lung meridian, stomach meridian, etc.). Mr. Paul Nogier played a very important role in this special form of acupuncture. In the 1950s, this French physician found the outer ear surface (article) to be a reflex area in which all parts of the body are represented.

The second part of the book entitled Practical Application describes all methods of mapping ear reflex area as well as finding foci points. Such actions are done manually with a stirrup or pressure probe or by an electrical device that measures differences in electrical resistance of ear skin. After such a precise diagnosis and obligatory conventional diagnostics, therapy is initiated. The aim is the same, either using needling the ear reflex zone or infiltrating the focus itself with a local anesthetic or treating the focus or focus point with laser beam, i.e. to bring the patient to a state which is free from focal disturbances.

In the second half of Part 2, quite much is said about the more advanced and skill-needed method of focus diagnosis and therapy under vascular autonomic signal control. The method is based on Nogier’s discovery of auricular cardiac reflex. Stimulation of patient ear reflex zones causes change in the pulse quality. Shortly after Nogier’s discovery, Bahr introduced a 3-volt hammer; that has become the main tool in VAS method. It is used to locate or stimulate points on the auricle without even touching them. The last section of the second part deals with laser application in focus diagnosis and therapy.

The last part C of the book provides useful information on training courses, equipment needed, supply sources, contact list, and answers to frequently asked questions. It is completed with a well organized index. Containing 250 pages, rich in illustrations and tables, the book is written clearly in a very readable style. It is a valuable contribution for all those professionally engaged in acupuncture and auriculo-medicine, for those dealing with therapy resistant patients, those that are just starting, and all those that simply want to expand treatment possibilities.

Scientific Approach to Diagnosis and Treatment of Headaches
Zagreb, March 21, 2004

In the autumn 2003, the International Society for Headache accepted a new classification of headaches. Therefore, Medical Division of the Croatian Academy of Sciences and Arts organized a symposium entitled Scientific Approach to Diagnosis and Treatment of Headaches, that was held in the Renaissance Hall in Zagreb on March 21, 2004.

The Symposium was organized in four sections. Each section was followed by a short recess, and after two morning sessions there was a break for lunch.

After the introduction given by President of Medical Division of the Croatian Academy of Sciences and Arts, Academician Zvكانа Kusik, the Symposium began with a lecture presented by Professor Vida Demarin, Head of University Department of Neurology, Sestre milosrđne University Hospital, Zagreb, on headache as one of the most common diagnoses in medicine and one of the most frequent symptoms encountered by medical professionals. She stressed that causes of headache varied widely from benign and usual to serious ones. Then, Professor Dubravko Buljčević from private practice in Zagreb gave an interesting lecture on the pathophysiology of pain and especially pain in head. Professor Ksenija Wilhelm, Head of University Department of Neurology, Ričića University Hospital Center, delivered a lecture on the clinical picture of migraine. Professor Ivo Lulić, Head of Department of Neurology, Split University Hospital, completed the first part of the Symposium with a lecture on the role of triptans in therapy of migraine.

After a short recess, the Symposium continued with a lecture given by Professor Zlatko Tikanjec from University Department of Neurology, Sestre milosrđne University Hospital, Zagreb, on tension headache. Assistant Professor Davor Juričić from University Department of Neurology, Osijek University Hospital, gave an interesting lecture on cluster headache, and Assistant Professor Vesna Štefčić from University Department of Neurology, Sestre milosrđne University Hospital, Zagreb, continued with a lecture on neurologic diseases as the causes of headaches. Professor Vida Demarin, Head of University Department of Neurology, Sestre milosrđne University Hospital, Zagreb, completed the second part with a lecture on the news in therapy of headaches.

After lunch, Assistant Professor Arijana Lovrenčič-Huzjan from University Department of Neurology, Sestre milosrđne University Hospital, Zagreb, continued the Symposium with a lecture on the role of neurosonology in the diagnosis of headaches. Professor Miljenko Kalezec from University Department of Diagnostic and Interventional Radiology, Sestre milosrđne University Hospital, Zagreb, gave an interesting lecture on neuroimaging methods in the diagnosis of headaches. Then, Professor Vera Poljegović-Smok from Vrapče University Psychiatric Hospital, Zagreb, presented a lecture on psychiatric causes of headache. The third part of the Symposium was completed with a lecture by Professor Ljubo Kalogjera from University ENT Department, Sestre milosrđne University Hospital, Zagreb, on headaches as the cause of ENT diseases. After a short recess, Eugenija Reiner-Tedeschi from University Department of Ophthalmology, Sestre milosrđne University Hospital, Zagreb, delivered a lecture on ophthalmology diseases as the causes of headaches. Vesna Đuranović from Zagreb University Children’s Hospital, Zagreb, gave an interesting lecture on headaches in children. The last lecture was presented by Assistant Professor Tomislav Babić from University Department of Neurology, Zagreb University Hospital Center, Zagreb, dealing with drug utilization in therapy of headaches. The Symposium was closed by fruitful discussion.

After the Symposium dinner was served and the participants had an opportunity for informal gathering and discussion on various topics. The Symposium was well organized and experts from all over Croatia presented lectures from their fields of expertise. More than 200 participants were present at the Symposium. All participants were delighted to have an opportunity to hear about latest advances in the field of headache and to listen to lectures delivered by recognized experts about headache that has a significant role in everyday practice of neurologists as well as of general practitioners and other physicians.

All lectures presented at the meeting will be published by Medical Division of the Croatian Academy of Sciences and Arts and distributed to all participants, thus giving them an opportunity to have all data on headache important for daily practice compiled in single publication.

Zlato Tikanjec
HISTORICAL REVIEW

Liječnički vjesnik from 1914, in the News section, brings information on the first course in practical medicine entitled Examples from Medical Practice. Thus, ninety years ago Croatian medicine initiated continuous education of physicians, which had already existed in all west European countries, in the USA and, as stated by Dr. Dragutin Malek, in Hungary from 1883. Although courses on trachoma led by Dr. Kurt Hohm from our hospital had already been organized before, it was in 1914 that true course were organized by the Croatian Medical Association, governmental health authorities, and physicians from hospitals and other health institutions. So, the course in surgery (led by Dr. M. Čačković), ophthalmology and dermatovenerology (Dr. D. Malek) and pediatrics (Dr. R. Marković) were held at our hospital. This first course was extensive ly presented in Liječnički vjesnik.

Of course, the contributions from our departments and physicians are of greater historical relevance for our hospital. Thus, Department of Surgery received special acknowledgment for its exemplary order, cleanliness and discipline; and Dr. M. Čačković for his readiness to provide all explanation requested on x-ray device (then the latest diagnostic novelty) in so-called Röntgen room; Dr. Malek for his patience and willingness to talk to course attendants; and his department for proper care of their patients, especially those suffering from genital diseases, also distributing due warnings to female patients in order to upgrade public morals.

All lecturers and other health institutions received acknowledgments. Here is just one citation on our hospital: “Who wants minor surgery? Who wants major surgery? Who wants theory, and who wants practice? Who wants conservative methods, and who wants high activities? Who wants fractures and luxations? Who wants x-ray? - Everything could be found there. And this mostly met with cordial hospitality and cooperativeness from both primary and secondary physicians. They all met us as their peers; it may have appeared that not only we were expected to learn from them, but that they also tended to enrich our rustic, nonspecialist experience”.

And so were launched the first courses of continuous education of physicians 90 years ago; in the year 1914, everything was new: new courses, novel diagnostic methods and new knowledge, however, the last two sentences clearlyconnect the past and the presence, and probably the future: “Hospitals were overcrowded, as they usually are everywhere in winter. There is a huge material indeed”.

INTERNET GUIDANCE

Besides general data bases to search through medical literature, already announced in this section, the US National Library of Medicine has developed a number of other interesting and useful web sites. This time, we have decided to introduce the following ones:

DI solver (Directory of Information Resources Online) contains data on organizations, projects, and biomedicine and health data bases. Some 10,000 data available from this data base contain comprehensive information on organizations and systems, especially those dealing with rare diseases, genetic diseases, maternal and children's diseases and their health, etc. DI solver data base is available at the following site:

Another interesting site is Profiles in Science. This data base contains biographic and other data on renowned scientists of the twentieth century in the fields of biomedicine and public health. Of special interest are pages on the pictures entitled The Visual Culture and Health Posters. Everybody knows a little about them, and that is why it appears to be highly useful and intriguing!

INSTRUCTIONS TO AUTHORS

ADM AND SCOPE
Acta Clinica Croatica is a peer reviewed general medical journal that publishes original articles that advance and improve medical science and practice. Authors must agree in accordance with the text. International Committee of Medical Journal Editors. Uniform requirements for manuscripts submitted to biomedical journals. N Engl J Med 1997; 336:109-15, with Instructions to authors that can be found on web page: http://www.icjme.org.

SUBMITTING OF A MANUSCRIPT
All manuscripts should be written in English. Instructions to authors are in accordance with the text. International Committee of Medical Journal Editors. Uniform requirements for manuscripts submitted to biomedical journals. N Engl J Med 1997; 336:109-15, with Instructions to authors that can be found on web page: http://www.icjme.org.

Submit manuscript in triplicate accompanied by a manuscript on a disk: Roxy disk (3.5-inch, 1.44 MB, IBM formatted), or compact disk – CD in generally used word processing format (MS Word for Windows is preferred, although manuscripts prepared using any other IBM-compatible word processor are acceptable) to:

Editorial Office, Acta Clinica Croatica, Scenic Milwaukee Universi-
y Hospital, Vinogradi 29, HR-10 000 Zagreb, Croatia.

AUTHORSHIP
All persons designated as authors should qualify for authorship, and all those who qualify should be listed. Each author should have particip-
ted sufficiently in the work to take public responsibilities for appropri-
ate portions of the content. All persons who contributed to the work who
are not authors should be named in the Acknowledgments. All authors
should take responsibility for the integrity of the whole work. From in-
ception to published article. Manuscripts should be accompanied by a
covering letter signed by all authors indicating a statement that the
manuscript has not been published or submitted for publication else-
where, a statement that the manuscript has been read and approved by
all the authors, and a statement about any financial or other conflict of
interest. A statement of copyright transfer to the journal must accom-
pany the manuscript.

PREPARATION OF MANUSCRIPT
Title: Print out the manuscript on white bond paper ISO A4 (212
× 297 mm), with margins of 35 mm. Title or print on only one side of
the paper. Use double spacing throughout, including the title page,
abstract, text, acknowledgments, references, individual tables, and leg-
ends. Number pages consecutively, beginning with the title page. Put
the page number in the lower right-hand corner of each page.
The text of manuscript should be divided into sections: Title page,
Abstract and Key Words, Introduction, Methods, Results, Discussion,
Acknowledgment, References, Tables, Legends and Figures.

Title page
The title page should carry the title of the article (which should be
concise but informative) and a short running title of the manuscript; full
name of author(s), with academic degree(s) and institutional affiliation;
the name and address of the author responsible for correspondence about
the manuscript including fax/ID E-mail address.

Abstract and Key Words
The second page should carry an abstract (of no more than 250 words).
The abstract should state the purpose of the study or investigation, basic
procedures, main findings, and the principal conclusions. It should
emphasize new and important aspects of the study or observations. Below
the abstract authors should provide 3 to 10 key words or short phrases
that will assist indexes in cross-indexing the article and may be pub-
lished with the abstract. Terms from the Medical Subject Headings
(MeSH) list of Index Medicus should be used for key words.
photographs of people are used, either the subjects must not be identifiable or their pictures must be accompanied by written permission to use the photographs. All illustrations and figures could be submitted on disk, JPEG disk (3.5-inch, 1.44 MB, IBM formatted), or compact disk – CD in appropriate, generally used picture formats. The preferred formats are JPEG and TIFF, although any format in general use that is not application-specific is acceptable. Make sure that minimum resolution should be 300 dpi. Up to two color illustrations are acceptable for each manuscript free of charge.

Abbreviations
Use only standard abbreviations. The full term for which an abbreviation stands should precede the first use in the text unless it is a standard unit of measurement.

Acknowledgments
List all contributors who do not meet the criteria for authorship, such as a person who provided purely technical help, writing assistance, or a department chair who provided only general support. Financial and material support should also be acknowledged.

References
References should be numbered consecutively in the order in which they are first mentioned in the text. Identify references in text, tables, and legends by Arabic numerals in superscript.

References should be cited in the style based on the formats used by the Index Medicus. The titles of journals should be abbreviated according to the style used in Index Medicus (http://www.nlm.nih.gov). References to papers accepted but not yet published should be designated as “in press”. Authors should obtain written permission to cite such papers as well as verification that they have been accepted for publication.

Examples of reference citations are listed.

EDITORIAL PROCESS
After submission of the manuscript, the author may receive a letter confirming manuscript receipt. All manuscripts received are anonymously sent to at least two reviewers. Acta Clinica Scandinavica is committed to promote peer review quality and fairness. The reviewers are asked to treat the manuscript with confidentiality. Authors are welcome to suggest up to five potential reviewers for their manuscript (including co-authors or collaborators for the last three years), or to ask for the exclusion of reviewer(s) and the reasons for it. The Editorial Board may or may not accept authors’ suggestions regarding reviewers. Usually one to three months after submission the authors will receive the reviews. Generally, the instructions, objections, and requests made by the reviewers should be closely followed. The authors are invited to revise their manuscript in accordance with reviewers’ suggestions, and to explain amendments made in accordance with the reviewers’ requests. The articles that receive more than one reviewers’ recommendations for “major review” are sent, after revision to the same reviewer, who makes the final recommendation about the revised article. Based on reviewers’ suggestions and recommendations, the Editorial Board makes final decision about acceptance of submitted articles. Authors may receive a letter confirming the acceptance of submitted article for publication. Corresponding author will receive page-proof version of article to make final corrections of possible printing errors. The authors will receive 20 free reprints of the published paper free of charge.
