Kučinić, M. & Hrašovec, B.: Faunal and zoogeographical review of the Lepidoptera collection of the Faculty of Forestry, University of Zagreb, Part I: Noctuidae (Insecta: Lepidoptera), Nat. Croat., Vol. 8, No. 1., 27–47, 1999, Zagreb

During the last ten years, through efforts comprehensively to describe the biodiversity of the lepidopteran fauna of Croatia, systematic analysis of various collections has yielded significant faunal contributions on this group of insects. This paper gives faunal and zoogeographical data on the lepidopterous collection of Faculty of Forestry in Zagreb. Because of the broadness of this collection only data on the family Noctuidae is given, since other lepidopterous groups, chiefly Rhopalocera, Bombyces & Sphinges, Geometridae & Microlepidoptera, are presently being analyzed and will be presented in due time. 1200 specimens were taxonomically checked and among these 164 species were determined. From the faunal viewpoint, *Orthosia populeti* Fab. and *Hyssa cavernosa* Ever. were the two most interesting species. The dominance of Eurasian species reflects the fact that most of the collection sites are situated in the inland regions of Croatia.

Keywords: Collection, Noctuidae, Lepidoptera, Faculty of Forestry, Croatia

Kučinić, M. & Hrašovec, B.: Faunistički i zoogeografski prikaz lepidopteroške zbirke Šumarskog fakulteta Sveučilišta u Zagrebu, dio I: Noctuidae (Insecta: Lepidoptera), Nat. Croat., Vol. 8, No. 1., 27–47, 1999, Zagreb

Zbog utvrđivanja bioraznolikosti faune leptira Hrvatske u posljednjih se desetak godina sustavno obrađuju neobrađene entomološke zbirke u kojima se nalazi značajni materijal za poznavanje faune leptira pojedinih dijelova Hrvatske. Ovim radom prikazuju se faunističke i zoogeografske značajke lepidopteroške zbirke Šumarskog fakulteta u Zagrebu. Zbog opsežnosti zbirke iznose se rezultati obrade porodice Noctuidae, a preostali dio zbirke koji obuhvaća skupine: Rhopalocera, Bombyces i Sphinges, Geometridae i Microlepidoptera, prikazat će se u sljedećem radu. Obrađeno

je 1200 primjeraka sovica i utvrđene su 164 vrste. Faunistički najzanimljiviji su nalazi vrsta *Orthosia populeti* Fab. i *Hyssa cavernosa* Ever. Budući da je većina primjeraka prikupljena u kontinentalnom području Hrvatske, dominantan je udio euroazijskih zoogeografskih elemenata.

Ključne riječi: zbirka, Noctuidae, Lepidoptera, Šumarski fakultet, Hrvatska

INTRODUCTION

During the last ten years, due to an extensive review of Croatian lepidopterous species, methodical research has been performed on previously undescribed entomological collections which contain material of great value for the better knowledge of lepidopterous fauna from certain parts of Croatian territory. Consequently, data on species geographical distribution, their biological characteristics and finally, about their faunal composition as a whole are expanded on a national basis. Up to date, only part of the Central collection at the Croatian Natural History Museum (CNHM in subsequent text), covering Hesperiidae, part of Macroheterocera from the Igalfy collection (KUČINIĆ, 1992; KUČINIĆ *et al.*, 1994) and smaller part of the Lorković collection (KUČINIĆ & LORKOVIĆ, 1998) has been analyzed. In addition, the Košćec collection from the Municipal Museum Varaždin has been described by KUČINIĆ & BREGOVIĆ (1996) and KUČINIĆ *et al.* (1997).

The entomological collection of the Faculty of Forestry in Zagreb was founded at the beginning of the century. Apart from its scientific value, its cultural role is equally important since it has provided an educational resource to many generations of forestry students. Some parts of it date from the beginning of the century (Badovinac collection) and are still in very good condition. The collection covers all the insect orders and a small part of it is involved directly in the entomology classes. A large part of the collection is formed by specimens of the order Lepidoptera. This large order is mostly organized as a separate collection. Since there exist almost no published data covering this important collection, research was started with the intention of publishing the valuable data on collected Lepidoptera through past decades. The species collected originate either from the Badovinac collection (built up by the former member of Faculty staff, Zvonimir Badovinac) or from periodic field collecting done by researchers of the Forest Protection and Wildlife Management Department. Because of the extensiveness of the collection only the Noctuid family is presented in this paper. The remaining taxa of the order Lepidoptera, including Rhopalocera, Bombyces & Sphinges, Geometridae and Microlepidoptera are currently being analyzed and the results will be published later.

MATERIALS AND METHODS

For each determined species the locality of origin, date of collecting and zoogeographical characteristics are given. Taxonomic determination was done according to: BERIO (1985, 1991), FIBIGER (1990, 1993, 1997), HACKER (1989), KOCH (1988), RÁKOSY (1996), REZBANYAI-RESER (1985), RONKAY & RONKAY (1994, 1995) and SKINNER (1986). Along with the use of taxonomic keys, comparative research was done with

the CNHM collection of Hesperiidae & Macroheterocera. Additionally, more than 20 genital preparations were morphologically analyzed and a taxonomical determination was made according to: BERIO (1985, 1991), FIBIGER (1997), FORSTER & WOHLFAHRT (1971), RÁKOSY (1996) and RONKAY & RONKAY (1994, 1995). Taxonomic classification was assembled according to FIBIGER & HACKER (1990) and zoogeographical characteristics according to HACKER (1989) and RÁKOSY (1996). Because of certain technical problems, in this paper we did not use the latest systematics of Noctuidae according to NOWACKI & FIBIGER (1996). Biological characteristics of *Orthosia populi* Fab. and *Hyssa cavernosa* Ever. are given according to RÁKOSY (1996), and their spatial distribution in Europe according to NOWACKI & FIBIGER (1996).

Many species from the Badovinac collection carry labels indicating areas of Zagreb (e. g. Cmrok, Dolje, Josipovac, Jurj. ul. = Jurjevska ulica, Kraljevac, Maksimir, Medul. ul. = Medulićeva ulica, Moš. ul. – Mošinsk. ul. = Mošinskijeva ulica, today Nazorova ulica (LORKOVIĆ, 1976), Podsused, Prekrižje, Remetinec, Rokovo groblje, Tuškanac, Zelengaj). In such cases, the city of Zagreb is given in parentheses. A similar principle was obeyed with species originating from the nearby mountain Medvednica (e. g., Adolfovac – about 500 m; Kraljičin zdenac – 529 m; Rudnik – about 900 m; Sljeme – 1035 m, the highest peak) and with one locality on Kalnik mountain (Vratno). All localities in Zagreb or on Mt. Medvednica are charted as single entities since they lie relatively close in geographical terms (Fig. 1). All data referring to collecting localities which are given in parenthesis are not derived from the original labels but were added to depict more clearly the position of a collection site (Grubišno Polje, Mt. Kalnik, Mt. Medvednica, Slavonski Brod, Zagreb). A significant number of collected species from Mt. Kalnik are not precisely labeled with respect to the exact collection site but it can be assumed that most of the material came from Vratnik, a location where a significant amount of entomological collecting was done in the mid-seventies. The location »Zelenika« is given in the taxonomic list but is not charted since it is probable that it lies outside today's Croatian state borders Montenegro. The inscription »Ivin. Vod.« was assumed to correspond to the locality Ivine Vodice on the southern side of Mt. Velebit.

RESULTS AND DISCUSSION

Faunistic analysis

The complete study of noctuid fauna resulted in the analysis of 1200 specimens from the entomology collection of the Faculty of Forestry, 500 of these belonging to the Badovinac collection. There were total of 164 species determined among which 113 from the Badovinac collection and 91 from material collected in later years from department researchers (51 of these are not present in the Badovinac collection). According to the latest data, noctuid fauna in Croatia numbers about 585 species (KUČINIĆ, 1997; KUČINIĆ & LORKOVIĆ, 1998; KUČINIĆ *et al.*, 1998), which gives the analyzed collection a score of 28 % of total noctuid fauna. Since collecting was done mainly in forest biotopes, especially by the researchers of the Forest Protection Department, there is a relatively large number of species which partly reflect the composition of noctuids in forest ecosystems in some parts of Croatia.

Fig. 1. Geographical distribution of collection sites of noctuid moths from the Lepidoptera collection of the Faculty of Forestry, Zagreb.

Specimens were collected in more than 20 localities (Fig. 1). Most of the species in the Badovinac collection were collected in the Zagreb area (90 % of the species), while faculty researchers did the collecting on the higher regions of Mt. Kalnik and to a lesser extent near Grubišno polje (Slavonija) and Zalesina (Gorski kotar). In all other localities a significantly smaller number of specimens with only few species were recorded. The majority of the collection sites are situated in inland parts of Croatia (20 sites) and only four are located in Mediterranean part of Croatia (Mali Lošinj, Labin, Plomin, Sabunike).

The most numerous species in the collection are: *Diloba coeruceocephala* L., *Tholera decimalis* Poda and *Orthosia gothica* L. In one single night at the locality of Zalesina,

39 specimens of *T. decimalis* Poda were collected. There are several species with only one specimen represented in this collection, such as: *Autographa pulchrina* Haw., *A. iota* L., *Pyrois cinnamomea* Goeze, *Episema glaucina* Esp., *Hyssa cavernosa* Ever. and *Xestia rhomboidea* Esp.

Analysis of the collection expanded the knowledge of the spatial distribution of certain noctuid species in Croatia. This is especially true for the Mt. Kalnik region which was, until now, totally unknown with respect to noctuid fauna while 56 species are now registered for that area. The most interesting faunal data are those relating to *Hyssa cavernosa* Ever. and *Orthosia populeti* Fab. There is only one collected specimen of *H. cavernosa* Ever. from the locality Grubišno polje (on 1st of August 1976). In Croatia, it has been described only for the Podravina region by R. Kranjčev, who stated this as the first finding of the species in Croatia (KRAJČEV, 1985; 1995). In Europe, according to NOWACKI & FIBIGER (1996) this Eurasian species occurs only in the central part of the region and has been recorded in the faunae of Poland, Czech Republic, Slovakia, Italy, Austria, Hungary and Romania. Same authors do not mention this species for the regions of former Yugoslavia (NOWACKI & FIBIGER 1996). Neither, in a faunal review of Slovenian Macrolepidoptera, does CARNELUTTI mention this species as a member of the noctuid fauna in Slovenia (CARNELUTTI, 1992a; 1992b). In ecological terms, this species occurs in xerothermophilic oak associations. Its caterpillar feeds on various plants from the genera *Silene* and *Aristolochia*. It is a bivoltine species. Flight periods take place during May-June and July-August. It overwinters in the pupal stage.

O. populeti Fab. is also a rare species in collections from Croatia. In the Vinkovci area this species was recorded just once by the forester Gjuro Koča on 22nd of March 1892 (KOČA, 1901). In the collection analysed, there were only two specimens, collected in Zalesina (Gorski kotar) on 9th of April 1972. Taxonomic determination was backed up with genital preparation analysis and morphological comparison of these with taxonomic keys (BERIO, 1985; RÁKOSY, 1996). This species occurs in mesophytic to mesohygrophytic biotopes. The biological cycle is univoltine with a flight period from March till May. It is a Eurasian species distributed widely in Europe (Great Britain, Scandinavia, France, Spain, Greece etc.).

Concerning the relative richness of the species, the collection of the Faculty of Forestry has considerable value for improving knowledge of noctuid fauna in Croatia. Data acquired from the Badovinac collection facilitate temporal comparative research for the Zagreb region. It can be anticipated that such analysis will reflect the impact of intense anthropogenic influences in last cca. 80 years on this part of the fauna of Croatia.

Zoogeographical analysis

Zoogeographical analysis (Table 1) revealed that most of the collected noctuids belong to the group of Eurasian species (67.1 %) and to a smaller extent to that of Frontasiatic-Mediterranean species (23.8 %). This reflects the fact that most of the collection sites were in inland Croatia (Fig. 1). Zoogeographical analysis of the noctuid fauna of this region, in compliance with former works, confirms the presence

Table 1. Zoogeographical characteristics of Noctuid species from Collection of the Faculty of Forestry, Zagreb.

| Zoogeographical char. | Number of species | Percentage |
|-------------------------------|-------------------|------------|
| Eurasian species | 110 | 67,1 % |
| Front.-Mediterr. species | 39 | 23,8 % |
| Westasiatic-Mediterr. species | 3 | 1,8 % |
| Mediterranean species | 1 | 0,6 % |
| Pontic-Mediterr. species | 1 | 0,6 % |
| Holarctic species | 7 | 4,3 % |
| Cosmopolitan species | 2 | 1,2 % |
| Subtropical species | 1 | 0,6 % |
| Total | 164 | 100,0 % |

Front.-Mediterr. = Frontasiatic-Mediterranean species

Westasiatic-Mediterr. = Westasiatic-Mediterranean species

Pontic-Mediterr.=Pontic-Mediterranean species

of many Eurasian species in the rich and diverse fauna of these parts of Croatia (KUČINIĆ, 1992; KUČINIĆ & BREGOVIĆ, 1996; KUČINIĆ & PEROVIĆ, 1992/93; KUČINIĆ *et al.*, 1993; MLADINOV, 1977).

Prododeltote pygarga (Hufnagel, 1766)

Maksimir (Zagreb) 12. VI. 1921., 22. VI. 1921., 1921. (coll. Badovinac), Vratno (Kalnik Mt.) 20. VII. 1976. Eurasiac species.

Pseudeustrotia candidula ([Denis & Schiffermüller], 1775)

Maksimir (Zagreb) 1. VI. 1919. (coll. Badovinac). Eurasiac species.

Eublemma purpurina ([Denis & Schiffermüller], 1775)

Ivin.Vod. (Ivine Vodice, Velebit Mt.) 16. VII. 1924. (coll. Badovinac). Frontasiatic-Mediterranean species.

subfam. P L U S I I N A E*Diachrysia chrysitis* (Linnaeus, 1758)

Moš. ul. (Zagreb) 1916. (coll. Badovinac), Opeka 6. VI. 1972., Vratno (Kalnik Mt.) 18. VIII. 1976. Eurasiac species.

Diachrysia chryson ((Esper, [1789]))

Vratno (Kalnik Mt.) 7. VIII. 1976., 18. VI. 1976., 18. VIII. 1976. Eurasiac species.

Autographa gamma (Linnaeus, 1758)

Zagreb 26. V. 1921., 28. V. 1921. (coll. Badovinac), Lipovljani 20. VII. 1970., 25. VII. 1970. Eurasiac species.

Autographa pulchrina (Haworth, 1809)

lok.?, 20. VII. 1922. (coll. Badovinac). Eurasiac species.

Autographa iota (Linnaeus, 1758)

Adolfovac, 1916. (coll. Badovinac). Eurasiac species.

Abrostola asclepidias ([Denis & Schiffermüller], 1775)

Vratno (Kalnik Mt.) 1. V. 1975. Frontasiatic-Mediterranean species.

subfam. C U C U L L I N A E

Cucullia absynthii (Linnaeus, 1761)

Moš. ul. (Zagreb) 1916. (coll. **Badovinac**). Eurasian species.

Cucullia umbratica (Linnaeus, 1758)

Kalnik 26. V. 1972. Eurasian species.

Callophasia lunula (Hufnagel, 1766)

Cmrok (Zagreb) 4. V. 1919., Moš. ul. (Zagreb) 1916., 24. VI. 1920., 4. IV. 1921., Tuškanac (Zagreb) 12. V. 1921. (coll. **Badovinac**). Holarctic species.

Callophasia plathyptera (Esper, [1788])

Podsused (Zagreb) 9. V. 1918. (coll. **Badovinac**). Frontasiatic-Mediterranean species.

Pyrois cinnamomea (Goeze, 1781)

Moš. ul. (Zagreb) 26. III. 1917. (coll. **Badovinac**). Frontasiatic-Mediterranean species.

Amphipyra livida ([Denis & Schiffermüller], 1775)

Moš. ul. (Zagreb) 1916. (coll. **Badovinac**). Eurasian species.

Amphipyra berbera Rungs, 1949

Maksimir (Zagreb) IV. (caterpillar) – V. 1965. (imago). Frontasiatic-Mediterranean species.

Amphipyra tragopoginis (Clerck, 1759)

Adolfovac (Medvednica Mt.) 1916., Samobor 1916., Moš. ul. (Zagreb) 1916. (coll. **Badovinac**) Holarctic species.

subfam. H E L I O T H I N A E

Heliothis viriplaca (Hufnagel, 1766)

Cmrok (Zagreb) 1916., 15. VII. 1918., 16. VII. 1918., 17. VII. 1918., 26. VII. 1918. (coll. **Badovinac**). Eurasian species.

Heliothis ononis ([Denis & Schiffermüller], 1775)

Cmrok (Zagreb) 17. VII. 1918., 22. IV. 1922. (coll. **Badovinac**). Holarctic species.

Pyrrhia umbra (Hufnagel, 1766)

Moš. ul. (Zagreb) 1918., 12. VI. 1921. (coll. **Badovinac**), Kalnik 26. V. 1972. Holarctic species.

subfam. I P I M O R P H I N A E

Panemeria tenebrata (Scopoli, 1763)

Kraljevac (Zagreb) 24. IV. 1918., 14. V. 1921., Moš. ul. (Zagreb) 27. IV. 1918., 1918. (coll. **Badovinac**). Frontasiatic-Mediterranean species.

Acosmetia caliginosa (Hübner, [1813])

Kraljevac (Zagreb) 22. IV. 1922., 29. IV. 1920. (coll. **Badovinac**). Eurasian species.

Caradrina morpheus (Hufnagel, 1766)

Kalnik VIII. 1974. Eurasian species.

Hoplodrina ambigua ([Denis & Schiffermüller], 1775)

Zgb. (Zagreb) 24. V. 1968. Frontasiatic-Mediterranean species.

Hoplodrina octogenaria (Goeze, 1781)

Zalesina 6. VII. 1972. Eurasiac species.

Dypterygia scabriuscula (Linnaeus, 1758)

Moš. ul. (Zagreb) 12. VI. 1921., 2. IV. 1924. (coll. Badovinac). Eurasiac species.

Rusina ferruginea (Esper, [1785])

Kalnik VIII. 1974. Eurasiac species.

Polyphaenis sericata (Esper, [1787])

Moš. ul. (Zagreb) 29. VII. 1916. (coll. Badovinac). Frontasiatic-Mediterranean species.

Thalpophila matura (Hufnagel, 1766)

Zagreb (Moš. ul.) 11. VIII. 1916., 26. VIII. 1917., 10. VIII. 1922. (coll. Badovinac), Mali Lošinj 1. X. 1969. Frontasiatic-Mediterranean species.

Trachea atriplicis (Linnaeus, 1758)

Moš.ul. (Zagreb) 1916. (coll. Badovinac), Opeka 6. VI. 1972., 16. V. 1972., 1.V III. 1979., Vratno (Kalnik Mt.) 15. VI. 1977. Eurasiac species.

Euplexia lucipara (Linnaeus, 1758)

Moš. ul. (Zagreb) 1. VIII. 1921. (coll. Badovinac). Eurasiac species.

Phlogophora meticulosa (Linnaeus, 1758)

Moš. ul. (Zagreb) 21. V. 1916., 1929., Prekrižje (Zagreb) 4. V. 1918. (coll. Badovinac), Mali Lošinj 1. X. 1969. Frontasiatic-Mediterranean species.

Actinotia polyodon (Clerck, 1759)

Jurj. ul. (Zagreb) 29. IV. 1922. (coll. Badovinac). Eurasiac species.

Callopistria juventina (Stoll, 1782)

Josipovac (Zagreb) 1916. (coll. Badovinac). Eurasiac species.

Eucarta amethystina (Hübner, [1803])

Grubišno Polje 15. VI. 1976., Opeka 6. VI. 1972., Vratno (Kalnik Mt.) VIII. 1974., 1. VIII. 1977. Eurasiac species.

Ipimorpha retusa (Linnaeus, 1761)

Lipovljani, 20. VI. 1970., Vratno (Kalnik Mt.) 15. VII. 1977. Eurasiac species.

Mesogona oxalina (Hübner, [1803])

Ličko Lešće 9. IX. 1972. Eurasiac species.

Cosmia trapezina (Linnaeus, 1758)

Cmrok (Zagreb) 1916. (coll. Badovinac), Maksimir (Zagreb) IV. 1985. (caterpillar) – V. 1985. (pupa), Maksimir (Zagreb) 9. VI. 1975., Opeka 17. VI. 1970., 27. V. 1971., 28. V. 1971., 31. V. 1971. Frontasiatic-Mediterranean species.

Atethmia centrago (Haworth, 1809)

Tuškanac (Zagreb) 1. IX. 1921. (coll. Badovinac). Frontasiatic-Mediterranean species.

Xanthia gilvago ([Denis & Schiffermüller], 1775)

Sl. Brod (Slavonski Brod) 15. X. 1963. Eurasian species.

Xanthia citrago (Linnaeus, 1758)

Moš. ul. (Zagreb) 23. X. 1919. (coll. Badovinac). Frontasiatic-Mediterranean species.

Agrochola lota (Clerck, 1759)

Vratno (Kalnik Mt.) 5. X. 1977., 18. X. 1978. Eurasian species.

Agrochola nitida ([Denis & Schiffermüller], 1775)

Kalnik 19. X. 1972. Frontasiatic-Mediterranean species.

Eupsilia transversa (Hufnagel, 1766)

Cmrok (Zagreb) 2. III. 1921., Kraljevac (Zagreb) 10. III. 1919. (coll. Badovinac), Kalnik 9. III. 1972., Vratno (Kalnik Mt.) 21. IX. 1976., 12. II. 1977., 4. III. 1977., 5. X. 1977., 28. II. 1978., 20. III. 1980., 9. XI. 1980. Eurasian species.

Conistra vaccini (Linnaeus, 1761)

Jaskanski lug 8. X. 1990., Kalnik 23. III. 1972., Vratno (Kalnik Mt.) 3. XII. 1978. Eurasian species

Conistra rubiginea ([Denis & Schiffermüller], 1775)

Kraljevac (Zagreb) 11. VIII. 1919., Zelengaj (Zagreb) 25. III. 1919. (coll. Badovinac). Frontasiatic-Mediterranean species.

Conistra erythrocephala ([Denis & Schiffermüller], 1775)

Cmrok (Zagreb) 2. III. 1919., 5. III. 1921., 28. III. 1921., Kraljevac (Zagreb) 11. III. 1919., 28. II. 1921. (coll. Badovinac). Frontasiatic-Mediterranean species.

Episema glaucina (Esper, 1789)

Plomin IX. 1965. Frontasiatic-Mediterranean species.

Brachionycha nubeculosa (Esper, 1785)

Kalnik 9. III. 1972., 9. III. 1975., Vratno (Kalnik Mt.) 20. III. 1980. Eurasian species.

Brachionycha sphinx (Hufnagel, 1766)

Zagreb 1916., Moš. ul. (Zagreb) 1923., Josipovac (Zagreb) 4. XI.?, 25. X. 1920., Jurj. ul. (Zagreb) 4. XI. 1921. (coll. Badovinac). Eurasian species.

Brachylomia viminalis (Fabricius, 1766)

Vratno (Kalnik Mt.) 11. III. 1975., 11. VII. 1975., 3. VI. 1977. Eurasian species.

Lithophane socia (Hufnagel, 1766)

Cmrok (Zagreb) 5. III. 1921., Moš. ul. (Zagreb) 1916., 3. V. 1918. (coll. Badovinac). Eurasian species.

Lithophane ornitopus (Hufnagel, 1766)

Kraljevac (Zagreb) 5. III. 1919., 11. III. 1919., 28. III. 1921., Moš. ul. (Zagreb) 1920., Tuškanac (Zagreb) 1916. (jesen) (coll. Badovinac), Novska 27. III. 1974. Eurasian species.

Lithophane furcifera (Hufnagel, 1766)

Moš. ul. (Zagreb) 4. IV. 1923. (coll. Badovinac), Kalnik 14. III. 1972., Vratno (Kalnik Mt.) 1. IV. 1978., 2. V. 1978., 23. III. 1979. Eurasian species.

Xylena exsoleta (Linnaeus, 1758)

Moš. ul. (Zagreb) 6. III. 1924. (coll. Badovinac), Sl. Brod (Slavonski Brod) 15. X. 1963. Eurasian species.

Allophyes oxyacanthalae (Linnaeus, 1758)

Moš. ul. (Zagreb) 1916., Josipovac (Zagreb) 25. X. 1916. (coll. Badovinac), Grubišno Polje 15. X. 1976., Kalnik 6. VIII. 1974., Vratno (Kalnik Mt.) 7. X. 1976., 5. X. 1977., 2. IX. 1978., 18. X. 1978., 16. X. 1980. Frontasiatic-Mediterranean species.

Valeria oleagina ([Denis & Schiffermüller], 1775)

Jurj. ul. (Zagreb) 4. IV. 1922. (coll. Badovinac), Vratno (Kalnik Mt.) 7. IV. 1980. Frontasiatic-Mediterranean species.

Dichonia aprilina (Linnaeus, 1758)

Moš. ul. (Zagreb) 1. X. 1916., 26. X. 1916. (coll. Badovinac), Opeka 12. X. 1970. Frontasiatic-Mediterranean species.

Dichonia convergens ([Denis & Schiffermüller], 1775)

Moš. ul. (Zagreb) 1918. (coll. Badovinac). Frontasiatic-Mediterranean species.

Polymixis serpentina (Treitschke, 1825)

Plomin IX. 1965. Frontasiatic-Mediterranean species.

Blepharita satura ([Denis & Schiffermüller], 1775)

Vratno (Kalnik Mt.) 15. IX. 1975., 21. V. 1976., 5. V. 1977., 5. X. 1977., 21. V. 1976., 7. IX. 1977., Kalnik 14. IX. 1972. Eurasian species.

Apamea monoglypha (Hufnagel, 1766)

Moš. ul. (Zagreb) 1916., 19. VIII. 1921. (coll. Badovinac). Eurasian species.

Apamea lithoxylaea ([Denis & Schiffermüller], 1775)

Moš. ul. (Zagreb) 1916., 12. VI. 1918. (coll. Badovinac). Eurasian species.

Apamea charactera ([Denis & Schiffermüller], 1775)

Moš. ul. (Zagreb) 1916. (coll. Badovinac). Eurasian species.

Apamea sordens (Hufnagel, 1766)

Opeka 6. VI. 1972. Eurasian species.

Oligia strigilis (Linnaeus, 1758)

Moš. ulica (Zagreb) 20. V. 1918., 28. V. 1921., 25. VI. 1921. (coll. Badovinac), Zagreb 6. VII. 1972. Eurasian species.

Oligia latruncula ([Denis & Schiffermüller], 1775)

Moš. ulica (Zagreb) 20. V. 1918., Moš. ul. (Zagreb) 12. VI. 1921., 25. VI. 1921. (coll. Badovinac), Vratno (Kalnik Mt.) 3. VI. 1977. Eurasian species.

Luperina testacea ([Denis & Schiffermüller], 1775)

Moš. ul. (Zagreb) 22. X. 1918., 1923. (coll. Badovinac). Frontasiatic-Mediterranean species.

Charanyca trigrammica (Hufnagel, 1766)

Kalnik 25. V. 1972., 2. VI. 1975., Opeka 15. V. 1972., 16. V. 1972., Vratno (Kalnik Mt.) 8. V. 1977., 16. V. 1977., 3. VI. 1977., 2. VI. 1978., Zalesina 6. VII. 1972. Frontasiatic-Mediterranean species.

subfam. H A D E N I N A E

***Lacanobia w-latinum* (Hufnagel, 1766)**

Kalnik 26. V. 1972., Vratno (Kalnik Mt.) 16. V. 1977. Eurasian species.

***Lacanobia oleracea* (Linnaeus, 1758)**

Kalnik 15. VII. 1975., Maksimir (Zagreb) 2. VI. 1970., Osijek 28. IX. 1989., Vratno (Kalnik Mt.) 16. VII. 1977., Zgb. (Zagreb) 14. IX. 1977. Eurasian species.

***Lacanobia thalassina* (Hufnagel, 1766)**

Mošinsko. ul. (Zagreb) 1916., 20. V. 1918., 20. VI. 1918., 1. VI. 1919. (coll. Badovinac). Eurasian species.

***Hada nana* (Hufnagel, 1766)**

Opeka 6. VI. 1972., Kalnik 26. V. 1972., Vratno (Kalnik Mt.) 23. V. 1980., 15. VI. 1980. Eurasian species.

***Hecatera dysodea* ([Denis & Schiffermüller], 1775)**

Moš. ulica (Zagreb) 12. VI. 1918. (coll. Badovinac). Eurasian species.

***Hecatera bicolorata* (Hufnagel, 1766)**

Moš. ul. (Zagreb) 1916. (coll. Badovinac). Eurasian species.

***Hadena bistrigata* (Hufnagel, 1766)**

Moš. ul. (Zagreb) 29. VI. 1919., 24. VI. 1920., 2. VII. 1920., 17. V. 1921., 27. V. 1921., 1. VIII. 1921., 27. V. 1928. (coll. Badovinac). Eurasian species.

Faunistički i zoogeografski prikaz lepidopterološke zbirke Šumarskog fakulteta Sveučilišta u Zagrebu, I dio: Noctuidae (Insecta: Lepidoptera)

M. Kučinić & B. Hrašovec

Radi utvrđivanja raznolikosti leptira Hrvatske u posljednjih se desetak godina sustavno obrađuju neobrađene entomološke zbirke koje sadrže važne podatke o našoj fauni leptira. Njihovom obradom upotpunjuje se poznavanje rasprostranjenosti utvrđenih vrsta, značajke faune u pojedinim regijama, i Hrvatske u cjelini. Do sada je obrađen dio Macroheterocera iz zbirke »Igalfy« Hrvatskoga prirodoslovnog muzeja u Zagrebu (HPM-Zagreb) (KUČINIĆ, 1992; KUČINIĆ *et al.*, 1994), zbirke »Košćec«, Gradskog muzeja u Varaždinu (KUČINIĆ & BREGOVIĆ, 1996; KUČINIĆ *et al.*, 1997), dio materijala iz središnje zbirke Hesperiidae & Macroheterocera (HPM-Zagreb) (KUČINIĆ *et al.*, 1997), te manji dio materijala iz zbirke Lorković (HPM-Zagreb) (KUČINIĆ & LORKOVIĆ, 1998).

Entomološka zbirka Šumarskog fakulteta u Zagrebu osnovana je početkom ovog stoljeća. Osim znanstvene važnosti ima i nastavnu funkciju, posebice kolekcija Badovinac (sakupljena je dvadesetih godina ovog stoljeća). Obuhvaća sve skupine kukaca. Važan dio zbirke čini skupina Lepidoptera. Taj segment formiran je kao samostalna kolekcija. Sadrži bogat materijal podijeljen u dvije zasebne cjeline. Jednu čini kolekcija koju je stvorio ing. Badovinac (coll. Badovinac), a drugu novopriključeni materijal. Zbog veličine zbirke, u ovom radu iznosi se faunistički i zoogeografski prikaz porodice Noctuidae, a preostali dio zbirke, koji obuhvaća skupine: Rhopalocera, Bombyces i Sphinges, Geometridae i Microlepidoptera, nakon obrade prikazat će se u nekom od sljedećih radova.

Obrađeno je 1200 primjeraka sovica od kojih iz zbirke Badovinac potječe oko 500, a od djelatnika Šumarskog fakulteta 700 primjeraka. Utvrđene su 164 vrste, od čega u zbirci Badovinac 113, a od djelatnika Šumarskog fakulteta 91 (51 nije prisutna u coll. Badovinac). Prema posljednjim podacima fauna sovica Hrvatske broji oko 585 vrsta (KUČINIĆ, 1997; KUČINIĆ & LORKOVIĆ, 1998; KUČINIĆ *et al.*, 1998), tako da je u zbirci Šumarskog fakulteta zastupljeno 28% hrvatske faune. Budući da je sakupljanje leptira, posebice od djelatnika Šumarskog fakulteta bilo usmjereni na šumske asocijacije, zbirka je relativno brojna, te oslikava djelomičan sastav sovica šumskih zajednica pojedinih dijelova Hrvatske.

Najveći broj prikupljenih primjeraka odnosi se na vrste: *Diloba coeruceocephala* L., *Tholera decimalis* Poda i *Orthosia gothica* L. Od vrste *Tholera decimalis* Poda, prikupljeno je na lokalitetu Zalesina samo tijekom jedne noći 39 primjeraka. Sa po jednim primjerkom u zbirci je zastupljen veći broj vrsta: *Autographa pulchrina* Haw., *Autographa jota* L., *Pyrois cinnamomea* Goeze, *Episema glaucina* Esp., *Hyssia cavernosa* Ever. *Xestia rhomboidea* Esp. i dr.

Obradom zbirke upotpunjeno je poznavanje rasprostranjenosti za određeni broj speciesa, te su dani važni faunistički podaci za planinsko područje Kalnika smješte-

nog u sjeverozapadnoj Hrvatskoj čija je fauna sovica gotovo nepoznata, a ovim je radom utvrđeno 56 vrsta. Faunistički najzanimljiviji su nalazi sovica: *Orthosia populeti* Fab. i *Hyssa cavernosa* Ever. koje su obradom ove zbirke zabilježene drugi put u fauni Hrvatske. *Hyssa cavernosa* Ever. zabilježena je samo na području Podravine (KRAJNČEV, 1985; 1995), a *Orthosia populeti* Fab. samo krajem prošlog stoljeća na prostoru Vinkovaca (22. III. 1892.) (KOČA, 1901).

S obzirom na relativno velik broj vrsta, zbirka ima znatnu faunističku vrijednost, a podaci iz kolekcije Badovinac zanimljivi su za komparativna istraživanja faune sovica na području Zagreba, te utvrđivanje promjena uvjetovanih antropogenim djelovanjem u posljednjih 80-tak godina.

Zoogeografska analiza pokazala je da najveći broj prikupljenih vrsta pripada skupini euroazijskih elemenata (Tab. 1). Ti rezultati uvjetovani su područjem na kojem je najveći dio materijala iz zbirke Šumarskog fakulteta prikupljen, a to su lokaliteti na prostoru kontinentalnog dijela Hrvatske (Sl. 1). Zoogeografska analiza faune sovica tog područja i prema prijašnjim radovima ukazuje na dominantan udio euroazijskih vrsta u sastavu faune tih prostora Hrvatske (KUČINIĆ, 1992; KUČINIĆ & BREGOVIĆ, 1996; KUČINIĆ & PEROVIĆ 1992/93; KUČINIĆ *et al.*, 1993; MLADINOV, 1977).
