Publication Ethics and Publication Malpractice Statement

The publication of a paper in a peer reviewed Journal is an essential model for our Journal Tehnički vjesnik – Technical Gazette (TV-TG). It is necessary to agree upon standards of expected ethical behaviour for all parties involved in the act of publishing: the author, the Journal Editor, the reviewer and the publisher. Our ethic statements are based on COPE’s Best Practice Guidelines for Journal Editors.

**Publication decisions**
The editor of the Journal TV-TG is responsible for deciding which of the papers submitted to the Journal should be published. The editor may be guided by the policies of the Journal's Editorial Board and constrained by such legal requirements as shall then be in force regarding libel, copyright infringement and plagiarism. The editor may confer with other members of Editorial Board or reviewers in making this decision.

**Fair play**
The editor at any time evaluates the manuscripts for their intellectual content regardless of the race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.

**Confidentiality**
The Editor and the Editorial Board must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher, as appropriate.

**Disclosure and conflicts of interest**
Unpublished materials disclosed in a submitted manuscript must not be used in an editor’s own research without the expressly written consent of the author.

**Duties of Reviewers**

**Contribution to Editorial decisions**
Peer review assists the editor in making editorial decisions and through the editorial communications with the author may also assist the author in improving the paper.

**Promptness**
Any selected reviewer who feels unqualified to review the research reported in a manuscript or knows that its prompt review will be impossible should notify the editor and excuse themselves from the review process.

**Confidentiality**
Any manuscripts received for review must be treated as confidential documents. They must not be shown to or discussed with others except as authorized by the editor.

**Standards of objectivity**
Reviews should be conducted objectively. Personal criticism of the author is inappropriate. Reviewers should express their views clearly with supporting arguments.

**Acknowledgement of sources**
Reviewers should identify relevant published work that has not been cited by the authors. Any statement that an observation, derivation, or argument had been previously reported should be accompanied by the relevant citation. A reviewer should also call to the editor’s attention any substantial similarity or overlap between the manuscript under consideration and any other published paper of which they have personal knowledge.

**Disclosure and conflict of interest**
Privileged information or ideas obtained through peer review must be kept confidential and not used for personal advantage. Reviewers should not consider manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or institutions connected to the papers.
Duties of Authors

Reporting standards
Authors of reports of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the paper. A paper should contain sufficient detail and references to permit others to replicate the work. Fraudulent or knowingly inaccurate statements constitute unethical behaviour and are unacceptable.

Data access and retention
Authors are asked to provide the raw data in connection with a paper for editorial review, and should be prepared to provide public access to such data (consistent with the ALPSP - STM Statement on Data and Databases), if practicable, and should in any event be prepared to retain such data for a reasonable time after publication.

Originality and plagiarism
The authors should ensure that they have written entirely original works, and if the authors have used the work and/or words of others that this has been appropriately cited or quoted.

Multiple, redundant or concurrent publication
An author should not in general publish manuscripts describing essentially the same research in more than one Journal or primary publication. Submitting the same manuscript to more than one Journal concurrently constitutes unethical publishing behaviour and is unacceptable.

Acknowledgement of sources
Proper acknowledgement of the work of others must always be provided. Authors should cite publications that have been influential in determining the nature of the reported work.

Authorship of the paper
Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included in the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

Hazards and human or animal subjects
If the work involves chemicals, procedures or equipment that have any unusual hazards inherent in their use, the author must clearly identify these in the manuscript.

Disclosure and conflicts of interest
All authors should disclose in their manuscript any financial or other substantive conflict of interest that might be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed.

Fundamental errors in published works
When an author discovers a significant error or inaccuracy in their own published work, it is the author's obligation to promptly notify the Journal editor or publisher and cooperate with the editor to retract or correct the paper.

Editor-in-Chief,
