Vocabulary of Two Brotherhoods from the 17th Century

In this paper, the author attempts to point out how brotherhoods on the islands of the Zadar archipelago, apart from their cultural, religious and national importance, played a significant role in the development of the Croatian language. Assuming that the rules of Zadar brotherhoods served as a model to those of the village, the author explores the particularities of that vocabulary, primarily terminology in two *skulas* (brotherhoods) from the islands of Silba and Premuda from the 17th century. In creating rules of brotherhoods, Glagolitic monks played a leading role, and uniformity of the language, concludes the author, is a reflection of their effort to standardize the language.
