The focus of this conference is on the epistemological, theoretical, methodological, technical and practical contributions that the systemic approach has made to disciplinary and interdisciplinary perspectives (sociology, management, engineering, biology, economics, mathematics, statistics, etc.), which are rooted in the systemic approach itself, and which have developed theories and methods and which concern the complexity of these perspectives. The aim of the conference then is to letter different strands, trends, methods, and case studies of the systemic vision to emerge also drawing a net of venues in the world where the systemic thinking is strong and/or growing. The official language of the conference is English.
