O CITIRANOSTI ČASOPISA ACTA STOMATOLOGICA CROATICA

Citiranost časopisa *Acta Stomatologica Croatica* u važnijim međunarodnim indeksima koji izvješćuju o svjetskoj znanstvenoj i stručnoj publicistici u stomatologiji zadnjih je nekoliko godina bila u središtu zanimanja znanstvenonastavnih djelatnika Fakulteta, a posebice onih koji su prigodom reizbora u znanstvenonastavna zvanja dokazivali da su njihovi radovi objavljeni u časopisima koji su bili citirani u odgovarajućim indeksima. Pri tome su si predstavnici stručnih povjerenstava dopuštali procjene koje ponekad nisu odgovarale stvarnome stanju.

Kako se slične procjene ne bi ponavljale u budućnosti, kako bismo jasno označili u kojim je indeksima citiran naš časopis i da bismo ušli u druge važnije međunarodne indekse, uredništvo Časopisa poduzelo je odgovarajuće postupke o kojima želi izvjestiti čitateljstvo, a napose znanstvenonastavne djelatnike Fakulteta. Otkako je u veljači godine 1996. sadašnje Uredništvo počelo voditi Časopis, prve su dužnosti bile nadoknaditi izgubljeni vrijeme, tiskati zaostale brojeve, riješiti zaostale sporove, pribaviti novac, povećati pretplatu i redovito tiskati Časopis četiri puta u godini.

Pošto je sve spomenuto riješeno, nastojali smo prodrijeti u Current Contents i godine 1997. ponovili smo zahtijevati

Najviše poteškoća pravile su zadnjih godina interpretacije o citiranosti časopisa u Index to Dental Literature i u MEDLINE bazi podataka. Nakon posljednjih dopisa prijašnjega glavnog i odgovornog urednika u rujnu godine 1995., sadašnje je Uredništvo pisalo American Dental Association i National Library of Medicine četiri puta od travnja 1996. do kolovoza 1997. i postavljalo pitanja o citiranosti Časopisa u Index to Dental Literature i Index Medicus. Zadnji odgovor dobiven je iz National Library of Medicine. On potvrđuje da je Časopis indeksiran u Index fo Dental Literature/MEDLINE i također uključen u NLM online MEDLARS sustav o čemu su fotokopijama obaviješteni članovi Fakultetskoga vijeća (preslika prva). Kako je i nakon toga bilo tvrdnji da Časopis od 1992. nije tiskan u spomenutom indeksu, izvršena je provjera u Središnjoj knjižnici Medicinskog fakulteta i utvrđeno je sljedeće:

Časopis *Acta Stomatologica Croatica* ne pojavljuje se od godine 1992. u tiskanom izdanju Index to Dental Literature, o čemu su prošli i sadašnji urednik višekratno pisali u American Dental Association, ali nisu dobili odgovor na postavljena pitanja. Odgovori su tvrdili da je Časopis trajno citiran u Index to Dental Literature/MEDLINE bazi podataka, a što smo potvrdili u knjižnici Medicinskog fakulteta (druga preslika). Vidljivo je da je Časopis citiran od 1967., a oznaka s tri zvjezdice znači aktualnu citiranost Časopisa.

Dear Prof. Knezevic:

Thank you for your letter of August 28 concerning your interest in having *Acta Stomatologica Croatica* indexed and included in *Index Medicus*[®]/MEDLINE. I am pleased to inform you that this title is already indexed for the *Index to Dental Literature*/MEDLINE and is therefore included in the NLM's online MEDLARS system. At this time, NLM is not forwarding such journal titles to the Literature Selection Technical Review Committee for review.

Photocopy I

jev u Institute for Scientific Information-Philadelphia, USA, za uvrštenje, koji je prijašnji glavni i odgovorni urednik prof. Vladimir Lapter, zatražio godine 1995. Ponovno smo odbijeni, s odgovarajućim preporukama kako poboljšati Časopis i s mogućnošću da ponovimo zahtijev za 24 mjeseca. Svjesni smo nedostataka Časopisa i činjenice da na njemu treba i dalje uporno raditi, pa rok od dvije godine nije dugo razdoblje da bi se učinio kvalitativan pomak. Taj će pomak biti vidljiv već u ovome volumenu.

Oznaka D označuje polje stomatologije, a citati se mogu pojaviti u MEDLARS bazi podataka i drugim MEDLARS indeksima osim Index Medicusa. Tako je citiranost časopisa u zadnjih nekoliko godina nađena u HEALTHSTAR, TOXLINE, AIDSLINE, CANCERLIT i NUCLEAR SCI.

Treća preslika, uz to što ima nekoliko netočnosti koje se tiču jezika, izdavača i adrese, ipak pokazuje trajnu citiranost Časopisa u Index to Dental Literature od godine 1967. bez obzira na to je li se časopis citirao u tiskanome obliku

ili u njegovoj online bazi podataka, što je dovoljna potvrda autorima koji dokazuju valjanost radova objavljenih u časopisu *Acta Stomatologica Croatica* bez obzira na to u kojoj su godini bili tiskani.

Ta činjenica samo potvrđuje tvrdnje svih onih, među kojima je i sadašnji glavni i odgovorni urednik, koji su smatrali da Časopis nije izgubio svoju citiranost u spomenutom indeksu te da su u velikoj zabludi bili oni koji su radove objavljene u godinama u kojima Časopis nije bio citiran u tiskanome obliku isključivali iz radova težine sekundarnih indeksa. Slično se je događalo i u vrhunskim državnim i sveučilišnim povjerenstvima sve do trenutka kada je *Acta Stomatologica Croatica* konačno na istim razinama proglašena nacionalno važnim časopisima u stomatologiji. No to ne znači da Uredništvo i dalje neće ustrajano tražiti obrazloženje zašto se Časopis ne pojavljuje, odnosno tek povremeno pojavljuje u tiskanome obliku Index to Dental Literature.

Što se tiče drugih indeksa, potvrđena je citiranost Časopisa u Biological abstracts/BIOSIS bazi podataka.

Neki od dosad spominjanih indeksa više ne postoje, kao što je npr. Referativny Žurnal, a Ulrich's International Periodicals Directory nije indeks koji referira o časopisima već popis svjetske znanstvenostručne publistike.

U nadi da će ovih nekoliko podataka pomoći da se u budućnosti ne bi ponovile pogreške prošlosti i sa željom da budemo do kraja jasni u predstavljaju Časopisa i dalje ćemo ustrajati podizati njegovu kakvoću.

JOURNAL ACTA STOMATOLOGICA CROATICA - CITATIONS

Citations of the journal *Acta Stomatologica Croatica* in important international indexes, which report on world scientific and professional publications in the field of dental medicine has been in the centre of interest of scientific-teaching staff of the School of Dental Medicine over the last few years, particularly those who, during re-election to scientific-teaching positions, proved that their papers had been published in journals which were cited in relevant indexes. At the time, representatives of professional committees allowed evaluation, which occasionally was not in keeping with the actual situation.

In order to prevent similar occurrences in the future, and so that we can clearly define in which indexes our journal is cited, and in order to become included in other major international indexes, the Committee has taken certain steps, about which it is the intention

of the Editorial Office to inform readers, particularly the scientific-teaching staff of the School.

Since the present Editorial Office took over the journal in February of 1996, their first duty was to make up for lost time, print back print back non realized numbers, solve old conflicts, procure financial means, increase the number of subscriptions and to carry on with the task of regularly printing the journal four times a year.

In 1997, after solving the above, we again requested the Institute for Scientific Information-Philadelphia, USA for inclusion in Current Contents. This had previously been requested in 1995 by the previous Editor in Chief, Prof. Vladimir Lapter. Unfortunately, we were again refused, with relevant suggestions for improving the journal and the possibility of repeating our request in 24 months. We are well aware of the failings of the journal and the fact that much work on the journal is needed, and that two years is not a long period in which to put into effect qualitative improvements. However, we believe that improvements will already be visible in this volume.

Most difficulties occurred in the last few years with regard to interpretation of citations in journals in the Index to Dental Literature and MEDLINE data bases. After the last communications of the previous Editor in Chief in September, 1995, the present Editorial Office wrote four times to the American Dental Association and the National Library

of Medicine from April 1996 to August 1997, requesting information on citations of the journal in Index to Dental Literature and Index Medicus. The last answer was received from the National Library of Medicine, confirming that the journal is indexed in Index to Dental Literature/MEDLINE and also included in NLM online MEDLARS system, about which members of the School Committee were informed by photocopies (photocopy I). As, claims continued to be made that the journal had not been printed in the above indexes since 1992, a check was made in the Central Library of the School of Medicine, where the following was established.

With effect from 1992 the journal *Acta Stomatologica Croatica* has not appeared in the printed editions of Index to Dental Literature, about which the previous and present Editor wrote to the American Dental Association on several occasions, and about which no answer was received to the questions asked. However, it was claimed that the journal was permanently cited in the Index to Dental Literature/MEDLINE data bases, and the same was confirmed in the Library of the School of Medicine (photocopy II). The journal has been cited since 1967, and the

designation with three stars indicates actual citations of the journal. The designation D denotes the field of dental medicine, and citations can appear in MEDLARS data base and other MEDLARS indexes, apart from Index Medicus. Thus, citations of the journal over the last few years has been found in HEALTHSTAR, TOXLINE, AIDSLINE, CANCERLIT and NUCLEAR SCI.

Photocopy III, apart from the fact that it contains a few inaccuracies regarding language, publishers and addresses, shows permanent citation of the journal in Index to Dental Literature since 1967, regardless of whether the journal was cited in printed form or in its online data base, which is sufficient confirmation to authors, and which shows the importance of papers published in the journal *Acta Stomatologica Croatica*, regardless of the year in which they were printed.

This fact confirms the claim of all those, among whom is the present Editor in Chief, who considered that the journal had not lost its citation in the above indexes, and those were wrong excluded who excluded papers published in the years in which the journal was not cited in printed form, from papers with the importance of secondary indexes.

A similar situation had also occurred in eminent national and university commissions, up to the moment when the journal *Acta Stomatologica Croatica* was finally pronounced a nationally important journal in the field of dental me-

dicine. However, the Editorial Office will continue in their endeavours to receive an explanation of why the journal does not appear, i.e. occasionally appears, in printed form in Index to Dental Literature.

With regard to other indexes, citation of the journal has been confirmed in Biological Abstracts/BIOSIS data base.

Some of the indexes mentioned no longer exist, such as the Referativny Žurnal, while Ulrich's International Periodicals Directory is not an index which refers about journals, but is a list of world scientific-professional publicity.

In the hope that these few data will help to ensure that past mistakes will not be repeated in the future, and in order to be as precise as possible in presenting the journal, we will continue in our attempts to raise its quality.

KLINIČKA ODLUKA ZA IZRADU I PLANIRANJE POSTUPKA U OSEOINTEGRACIJI

ENGELMAN MICHAEL J.

Quintessence Publishing Co, Inc. 1996.

ISBN =-86715-318-0

Mekani uvez, 219 stranica, 257 ilustracija u boji, 44 fotografije u boji,

Cijena: 63 GBP.

Ovu bi knjigu bolje bilo nazvati priručnikom za kliničare koji u svojoj praksi susreću bolesnike s dentalnim statusom u kojemu nedostaje jedan ili više zuba. Namjera je autora bila olakšati i ubrzati vrste liječenja, uzevši u obzir sve važne čimbenike - kliničku sliku i dentalni status bolesnika, izvedive terapijske postupke, vještinu i mogućnosti liječnika, educiranost bolesnika, te njegove financijske mogućnosti.

U prvome poglavlju autor je klasificirao bolesnike u skupine prema dentalnome statusu, tj. prema zubima koji nedostaju. Za svaku pojedinu skupinu iznesena su sva moguća rješenja - fiksoprotetska, mobilnoprotska, implantološka te kombinirana. Uz svako ponuđeno terapijsko rješenje iznesene su indikacije, kontraindikacije, prednosti i nedostaci.

U drugome poglavlju daju se smjernice kako bolesniku približiti problematiku implantologije. Autor smatra vrlo važnim da je bolesnik prije definitivnog izbora terapije sposoban realno shvatiti mogućnosti implantologije.

Treće poglavlje obrađuje ekonomsku stranu problema iz perspektive liječnika i iz perspektive bolesnika koji snosi troškove liječenja.

U četvrtome poglavlju predložen je plan implantoprotetske terapije koji se temelji na timskom pristupu - uključeni su opći stomatolog, oralni kirurg i zubni tehničar. Schemat-

ski je prikazan slijed terapijskih postupaka i faza u liječenju od prvoga pregelda do predaje rada.

Preostala poglavlja potanko obrađuju terapijske postupke i metode u implantoprotetskoj terapiji. Prethodno klasificirane skupine bolesnika sada se analiziraju s aspekta implantologije i daju se sve mogućnosti, indikacije, kontraindikacije i moguće komplikacije za svaki pojedini slučaj.

Brojni konkretni primjeri iz autorove prakse, savršene ilustracije i fotografije olakšavaju razumijevanje problema i približavaju implantologiju širem krugu stomatologa, ali i bolesnicima.

Posebno se apostrofira pravilno postavljanje indikacije za implantološku terapiju - iscrpna anamnestička, klinička i rendgenološka evaluacija bolesnika.

Pitanje okluzije obrađeno je u posebnom poglavlju i to s obzirom na dentalni status bolesnika, tj. specifičnosti različitih situacija i terapijskih rješenja.

Protetski dio rehabilitacije sistematiziran je također u posebnome poglavlju prema vrsti implantoprotetskoga rada.

Ovu knjigu preporučujem svima koji malo znaju o mogućnostima implantologije, ali i onima koji se implantologijom bave na razini svakodnovnog, praktičnog liječenja bolesnika s problemom nedostatka zuba.

Cijena od 63 funte i mekani uvez ne čine je osobito atraktivnom, ali sadržaj i njezina praktična upotrebljivost svakako da.

Marko Krmpotić

CLINICAL DECISION MAKING AND TREATMENT PLANNING IN OSSEOINTEGRATION

ENGELMAN MICHAEL J.

Quintessence Publishing Co. Inc. 1996

ISBN 0-86715-318-0

Soft back, 219 pages, 257 colour illustrations, 44 colour photographs

Price: 63 GBP.

The book would be better called a handbook for clinicians, who, during their practice, come across patients with a dental status in which one or more teeth are missing. The intention of the author is to facilitate and speed up the choice of type of treatment, taking account of all relevant factors - the clinical and dental status of the patient, the applicability of the therapeutic procedure, skill and capability of the physician, education of the patient and his/her financial ability.

In the first chapter the author classifies patients into groups according to dental status, i.e. according to the teeth which are missing. All possible solutions for each group are presented: fixed-prosthetics, mobile-prosthetics, implantology and combined. For each suggested therapeutic solution
