**Kralj, J. & Barišić, S.: Rare birds in Croatia. Third report of the Croatian Rarities Committee. Nat. Croat., Vol. 22, No. 2., 375–396, 2013, Zagreb.**

The third report of the Croatian Rarities Committee presents 123 records of rare birds accepted in the period of 2005–2012. Eleven species and one subspecies were added to the list of Croatian birds, giving the total number of 389 bird species recorded in Croatia in categories A to C. A further 11 species were recorded in category D and two in category E. Four species are removed from the rare birds list because of the increasing number of observations. The list of rare bird species now includes 61 species and three subspecies, of which nine species are included in category D (possible escapees) and two in category E (escapees).

**Key words:** rare birds, Croatia, bird list

Treći izvještaj Hrvatske komisije za rijetke vrste sadrži 123 opažanja prihvaćena u razdoblju od 2005–2012. U tom je razdoblju opaženo 11 vrsta i jedna podvrsta koje do sada nisu bile zabilježene u Hrvatskoj. Popis ptica zabilježenih u Hrvatskoj sada sadrži 389 vrsta zabilježenih u kategorijama A do C. Daljnjih 11 vrsta zabilježeno je u kategoriji D i dvije u kategoriji E. Četiri vrste su uklonjene s popisa rijetkih vrsta zbog povećane učestalosti njihovih opažanja u Hrvatskoj. Popis rijetkih vrsta sada obuhvaća 61 vrstu i tri podvrste, od kojih je devet vrsta u kategoriji D (vjerojatno odbjegle ptice) i dvije u kategoriji E (sigurno odbjegle ptice).

**Ključne riječi:** rijetke ptice, Hrvatska, popis vrsta ptica

### INTRODUCTION

The Croatian Rarities Committee was founded in 1999. Its task is to examine reported observations of bird taxa (species and subspecies) listed as rare species in Croatia or bird taxa not yet seen in Croatia in the wild and check if they are sufficiently documented to be cited in the scientific literature. Current members are: Jelena Kralj, Sanja Barišić, Vladimir Bartovsky, Ivan Budinski, Krešimir Leskovar and Dragan Radović. This is the third report of the Committee, covering years 2005–2012. The first report (KRALJ & RADOVIĆ, 2002) described the work of the Committee and covered historical data and data received until the end of 2001. The second report (KRALJ, 2005) covered the data received between the beginning of 2002 and the end of February 2005.

On the rare bird list with accepted records, the species are listed systematically (following DEL HOYO *et al.*, 1992–2011), and within species, records are listed by date. For each species, English, scientific and Croatian names are given. English and scientific names are given after DEL HOYO *et al.* (1992–2011), while Croatian names are given after RADOVIĆ *et al.* (2005) and an unpublished list of bird names prepared by the same au-

thors. The numbers after the species names refer to the number of records and the number of individuals reported since 1950 including those published in this report. If some of the counts were approximate, the least number followed by sign + is given. For each record, detailed information is given: date (DD/MM/YYYY), locality, number of birds and age or sex of birds if known. Observer name is given in brackets. For published records, the reference is given. The same information, but without the observer name, is given for the rejected records listed separately. The Checklist of the birds of Croatia is given in the Appendix 1.

For the list of rare birds, as well as for the Checklist of the birds of Croatia, AERC (Association of European Records and Rarities Committees) categories are used (<http://www.aerc.eu/guidelines.html>):

- A Species that have been recorded in an apparently natural state at least once since 1<sup>st</sup> January 1950.
- B Species that have been recorded in an apparently natural state but only between 1<sup>st</sup> January 1800 and 31<sup>st</sup> December 1949.
- C Species that were originally introduced by man, but have established self-supported breeding populations derived from introduced stock, also birds probably originating from a category C population in another country.
- D Species that would otherwise appear in categories A or B except that there is reasonable doubt that they have ever occurred in a natural state.
- E Species that have been recorded as escapees from captivity.

In the Checklist of the birds of Croatia, status is given following definitions in TUTIŠ *et al.* (2013).

### Abbreviations used

- ind. – individual
- ad. – adult bird
- imm. – immature bird
- juv. – juvenile bird
- ♂ – male
- ♀ – female
- is. – island

From 1<sup>st</sup> March 2005 to 31<sup>st</sup> December 2012 the Croatian Rarities Committee examined 136 records, 123 (90%) of which were accepted. This number includes a few records of rare birds observed before 2005, but received after the second report was published in 2005. In the denoted period, the first records of the African Spoonbill *Platalea alba*, Egyptian Goose *Aloochen aegyptiacus*, White-tailed Lapwing *Vanellus leucurus*, Greater Yellowlegs *Tringa melanoleuca*, Franklin's Gull *Larus pipixcan*, Black-throated Accentor *Prunella atrogularis*, Isabelline Wheatear *Oenanthe isabellina*, Booted Warbler *Hippolais caligata*, Hume's Leaf-warbler *Phylloscopus humei*, Yellow-crowned Bishop *Euplectes afer* and Rustic Bunting *Emberiza rustica* have been accepted, increasing the total number of birds recorded in Croatia to 389 species in categories A to C with a further 11 in category D and 2 in category E. One new subspecies has been reported: the Black-eared Kite *Milvus migrans lineatus*. The Northern Bald Ibis *Geronticus eremita*, extinct in Croatia in the 17<sup>th</sup> century (BAUER & GLUTZ VON BLOTZHEIM, 1966), have been observed for the first time in last 50 years. The observed bird was marked showing that it originated from a captive flock maintained in Austria. A Lappet-faced Vulture *Torgos tracheliotus* that

escaped from captivity has been found. For both species, records refer to confirmed escapees, therefore these two species were not included in the Checklist of the birds of Croatia (Appendix 1). The Croatian Red List (TUTIŠ *et al.*, 2013) uses BirdLife taxonomy, while in this paper, DEL HOYO *et al.* (1992-2011) is used. Therefore there is a discrepancy between these lists, as DEL HOYO *et al.* (1992-2011) recognise the Lesser Redpoll *Carduelis cabaret* as a valid species, which is not the case with the BirdLife checklist (BIRDLIFE, 2012).

Four species: the Cattle Egret *Bubulcus ibis*, Greater Flamingo *Phoenicopterus ruber*, Red Knot *Calidris canutus* and Red-throated Pipit *Anthus cervinus* were removed from the rare birds list because of the increased frequency of their observations. For the Red Knot and the Red-throated Pipit the increased number of records might be the result of more intensive bird-watching and organised collecting of data. For the other two species, it probably resulted from the increase in breeding populations in neighbouring countries (BACCETTI *et al.*, 2008, DRAGONETTI & GIOVACCHINI, 2009). The list of rare bird species now includes 61 species and 3 subspecies, of which nine species are included in category D (possible escapees) and two in category E (escapees).

## SAŽETAK

### Rijetke ptice u Hrvatskoj Treći izvještaj Hrvatske komisije za rijetke vrste

J. Kralj & S. Barišić

Treći izvještaj Hrvatske komisije za rijetke vrste sadrži 123 opažanja prihvaćena u razdoblju od 2005–2012. U tom je razdoblju opaženo 11 vrsta koje do sada u Hrvatskoj nisu bile zabilježene: afrička žličarka *Platalea alba*, egipatska guska *Alopochen aegyptiacus*, bjelorepi vivak *Vanellus leucurus*, žutonoga prutka *Tringa melanoleuca*, prerijski galeb *Larus pipixcan*, crnobradi popić *Prunella atrogularis*, azijska bjeloguza *Oenanthe isabellina*, voljić žbunjar *Hippobolais caligata*, srebrnastoprsi zviždak *Phylloscopus humei*, žutokruna pletilja *Euplectes afer* i šumska strnadica *Emberiza rustica* te jedna podvrsta, azijska lunja *Milvus migrans lineatus*. Zabilježen je jedan ćelavi ibis *Geronticus eremita* iz populacije koja je u procesu reintrodukcije u Austriji. Veliki sup *Torgos tracheliotus* ulovljen kod Senja sigurno potječe iz zatočeništva. Te dvije vrste stoga nisu uključene u popis ptica Hrvatske, već im je pridružena AERC (Association of European Records and Rarities Committees) kategorija E (odbjegle iz zatočeništva). Popis ptica zabilježenih u Hrvatskoj sada sadrži 389 vrsta u kategorijama A do C. Daljnjih 11 vrsta zabilježeno je u kategoriji D i dvije u kategoriji E. Četiri vrste: čaplja govedarica *Bubulcus ibis*, plamenac *Phoenicopterus ruber*, hrđasti žalar *Calidris canutus* i rusogrla trepteljka *Anthus cervinus* uklonjeni su s popisa rijetkih vrsta zbog povećane učestalosti njihovih opažanja u Hrvatskoj. Popis rijetkih vrsta sada obuhvaća 61 vrstu i 3 podvrste od kojih je devet vrsta zabilježeno u kategoriji D (vjerojatno odbjegle ptice) i dvije u kategoriji E (sigurno odbjegle ptice). Crveni popis ptica (TUTIŠ *i sur.* 2013) zasniiva se sistematici koju koristi BirdLife (BIRDLIFE 2012), dok je u ovom popisu korištena sistematika koju koristi DEL HOYO *i sur.* (1992–2011). Razlika u ukupnom broju zabilježenih vrsta ptica u Hrvatskoj između ta dva popisa posljedica je činjenice da DEL HOYO *i sur.* (1992–2011) navode alpsku juričicu *Carduelis cabaret* kao zasebnu vrstu, što nije slučaj u sistematici koju koristi BirdLife.

## APPENDIX 1. CHECKLIST OF THE BIRDS OF CROATIA

Category (AERC): – see main text

Status: R – regular (recorded in at least 7 years out of 10 between 2002 and 2012), Ir – irregular (recorded in fewer than 7 years out of 10 between 2002 and 2012), Ac – accidental (recorded more than 10 times between 1960 and 2012) Rare (recorded approximately less than 10 times in last 50 years).

Season: B – breeding species, W – wintering species, M – migratory species, Re – extinct in Croatia in associated season, \* – species is irregular in the associated status
