

BOOK REVIEW

IDENTIFYING AND TREATING BLOCKAGES TO HEALING, by Beate Strittmatter. Bibliography 2003, 257 pages, 150 illustrations, soft cover. € 44.95 / CHF 74.50 ISBN 3 13 127871 4

The handbook entitled *Identifying and Treating Blockages to Healing* by Beate Strittmatter, M.D., is a practical publication of a complementary medicine, which emphasizes one common problem in daily medical practice, i.e. that some patients seem to be resistant to treatment despite all therapeutic efforts. Quite often the key to solving this health problem is finding and treating a focus, a harmful influence that interferes with the body system of self-regulation (e.g., bacterial inflammation, knocked-knee, scar tissue). In conventional medicine, the search for such foci usually begins when symptoms have already set in. However, this method of identifying the focus by means of active acupuncture points in the reflex zones of the ear is an eye-opener for the therapist; it allows for finding the foci before they have caused noticeable symptoms.

In Part A of the book, many of these potential foci are described. From a tooth with inflamed pulp to skin scars, there

are various conditions that may cause pathophysiologic changes as well as disturbances at a higher level, the energy level. Here, we have to refer to the ancient wisdom of traditional Chinese medicine, which is based on the assumption that there is a so-called life energy or *Qi*, which moves through the body along the specific pathways called meridians (lung meridian, stomach meridian, etc.). Mr. Paul Nogier played a very important role in this special form of acupuncture. In the 1950s, this French physician found the outer ear surface (auricle) to be a reflex area in which all parts of the body are represented.

The second part of the book entitled Practical Application describes all methods of mapping ear reflex area as well as finding foci points. Such actions are done manually with a stirrup or pressure probe or by an electrical device that measures differences in electrical resistance of ear skin. After such a precise diagnosis and obligatory conventional diagnostics, therapy is initiated. The aim is the same, either using needling the ear reflex zone or infiltrating the focus itself with a local anesthetic or treating the focus or focus point with laser beam, i.e. to bring the patient to a state which is free from focal disturbances.

In the second half of Part 2, quite much is said about the more advanced and skill-needed method of focus diagnosis and therapy under vascular autonomic signal control. The method is based on Nogier's discovery of auricular cardiac reflex. Stimulation of patient ear reflex zones causes change in the pulse quality. Shortly after Nogier's discovery, Bahr introduced a 3-volt hammer, that has become the main tool in VAS method. It is used to locate or stimulate points on the auricula without even touching them. The last section of the second part deals with laser application in focus diagnosis and therapy.

The last part C of the book provides useful information on training courses, equipment needed, supply sources, contact list, and answers to frequently asked questions.

It is completed with a well organized index. Containing 250 pages, rich in illustrations and tables, the book is written clearly in a very readable style. It is a valuable contribution for all those professionally engaged in acupuncture and auriculomedicine, for those dealing with therapy resistant patients, those that are just starting, and all those that simply want to expand treatment possibilities.

Scientific Approach to Diagnosis and Treatment of Headaches

Zagreb, March 21, 2004

In the autumn 2003, the International Society for Headache accepted a new classification of headaches. Therefore, Medical Division of the Croatian Academy of Sciences and Arts organized a symposium entitled Scientific Approach to Diagnosis and Treatment of Headaches, that was held in the Renaissance Hall in Zagreb on March 21, 2004.

The Symposium was organized in four sections. Each section was followed by a short recess, and after two morning sessions there was a break for lunch.

After the introduction given by President of Medical Division of the Croatian Academy of Sciences and Arts, Academician Zvonko Kusić, the Symposium began with a lecture presented by Professor Vida Demarin, Head of University Department of Neurology, Sestre milosrdnice University Hospital, Zagreb, on headache as one of the most common diagnoses in medicine and one of the most frequent symptoms encountered by medical professionals. She stressed that causes of headache varied widely from benign and usual to serious ones. Then, Professor Dubravko Božićević from private practice in Zagreb gave an interesting lecture on the pathophysiology of pain and especially pain in head. Professor Ksenija Wilheim, Head of University Department of Neurology, Rijeka University Hospital Center, delivered a lecture on the clinical picture of migraine. Professor Ivo Lušić, Head of Department of Neurology, Split University Hospital, completed the first part of the Symposium with a lecture on the role of triptans in therapy of migraine.

After a short recess, the Symposium continued with a lecture given by Professor Zlatko Trkanjec from University Department of Neurology, Sestre milosrdnice University Hospital, Zagreb, on tension headache. Assistant Professor Davor Jančuljak from University Department of Neurology, Osijek University Hospital, gave an interesting lecture on cluster headache, and Assistant Professor Vesna Šerić from University Department of Neurology, Sestre milosrdnice University Hospital, Zagreb, continued with a lecture on neurologic diseases as the causes of headaches. Professor Vida Demarin, Head of University Department of Neurology, Sestre milosrdnice University Hospital, Zagreb, completed the second part with a lecture on the news in therapy of headaches.

After lunch, Assistant Professor Arijana Lovrenčić-Huzjan from University Department of Neurology, Sestre milosrdnice University Hospital, Zagreb, continued the Symposium with a lecture on the role of neurosonology in the diagnosis of headaches. Professor Miljenko Kalousek from University Department of Diagnostic and Interventional Radiology, Sestre milosrdnice University Hospital, Zagreb, gave an interesting lecture on neuroimaging methods in the diagnosis of headaches. Then, Professor Vera Folnegović-Šmalc from Vrapče University Psychiatric Hospital, Zagreb, presented a lecture on psychiatric causes of headaches. The third part of the Symposium was completed with a lecture by Professor Livje Kalogjera from University ENT Department, Sestre milosrdnice University Hospital, Zagreb, on headaches as the cause of ENT diseases. After a short recess, Eugenija Reiner-Tedeschi from University Department of Ophthalmology, Sestre milosrdnice University Hospital, Zagreb, delivered a lecture on ophthalmology diseases as the causes of headaches. Vesna Đuranović from Zagreb University Children's Hospital, Zagreb, gave an interesting lecture on headaches in children. The last lecture was presented by Assistant Professor Tomislav Babić from University Department of Neurology, Zagreb University Hospital Center, Zagreb, dealing with drug utilization in therapy of headaches. The Symposium was closed by fruitful discussion.

After the Symposium dinner was served and the participants had an opportunity for informal gathering and discussion on various topics.

The Symposium was well organized and experts from all over Croatia presented lectures from their fields of expertise. More than 200 participants were present at the Symposium. All participants were delighted to have an opportunity to hear about latest advances in the field of headache and to listen to lectures delivered by recognized experts about headache that has a significant role in everyday practice of neurologists as well as of general practitioners and other physicians.

All lectures presented at the meeting will be published by Medical Division of the Croatian Academy of Sciences and Arts and distributed to all participants, thus giving them an opportunity to have all data on headache important for daily practice compiled in single publication.

HISTORICAL REVIEW

Liječnički vjesnik from 1914¹, in the News section, brings information on the first course in practical medicine entitled Examples from Medical Practice. Thus, ninety years ago Croatian medicine initiated continuous education of physicians, which had already existed in all west European countries, in the USA and, as stated by Dr. Dragutin Mašek, in Hungary from 1883. Although courses on trachoma led by Dr. Kurt Hühn from our hospital had already been organized before, it was in 1914 that true course were organized by the Croatian Medical Association, governmental health authorities, and physicians from hospitals and other health institutions. So, the course in surgery (led by Dr. M. Čačković), ophthalmology and dermatovenereology (Dr. D. Mašek) and pediatrics (Dr. R. Marković) were held at our hospital. This first course was extensively presented in Liječnički vjesnik.

Of course, the contributions from our departments and physicians are of greater historical relevance for our hospital. Thus, Department of Surgery received special acknowledgment for its exemplary order, cleanliness and discipline; and Dr. M. Čačković for his readiness to provide all explanation requested on x-ray device (then the latest diagnostic novelty) in so-called Röntgen room; Dr. Mašek for his patience and willingness to talk to course attendants; and his department for proper care of their patients, especially those suffering from genital diseases, also distributing due warnings to female patients in order to upgrade public morals.

All lecturers and other health institutions received acknowledgments. Here is just one citation on our hospital: "Who wants minor surgery? Who wants major surgery? Who wants theory, and who wants practice? Who wants conservative methods, and who wants high activities? Who wants fractures and luxations? Who wants x-ray? – Everything could be found there. And this mostly met with cordial hospitality and cooperativeness from both primary and secondary physicians. They all met us as their peers; it may have appeared that not only we were expected to learn from them, but that they also tended to enrich on our rustic, nonspecialist experience"².

And so were launched the first courses of continuous education of physicians 90 years ago; in the year 1914, everything was new: new courses, novel diagnostic methods and new knowledge, however, the last two sentences clearly connect the past and the presence, and probably the future: "Hospitals were overcrowded, as they usually are everywhere in winter. There is a huge material indeed"³.

INTERNET GUIDANCE

Besides general data bases to search through medical literature, already announced in this section¹, the US National Library of Medicine has developed a number of other interesting and useful web sites. This time, we have decided to introduce the following ones:

DIRLINE (Directory of Information Resources Online) contains data on organizations, projects, and biomedicine and health data bases. Some 10,000 data available from this data base contain comprehensive information on organizations and systems, especially those dealing with rare diseases, genetic diseases, maternal and children's diseases and their health, etc. DIRLINE data base is available at the following site:

<http://dirline.nlm.nih.gov>

Another interesting site is Profiles in Science. This data base contains biographic and other data on renowned scientists of the twentieth century in the fields of biomedicine and public health. Of special interest are pages on the pictures entitled The Visual Culture and Health Posters. Everybody knows a little about them, and that is why it appears to be highly useful and intriguing!

INSTRUCTIONS TO AUTHORS

AIM AND SCOPE

Acta Clinica Croatica is a peer reviewed general medical journal that publishes original articles that advance and improve medical science and practice and that serve the purpose of transfer of original and valuable information to journal readers. Acta Clinica Croatica is published four times a year.

SUBMITTING OF A MANUSCRIPT

All manuscripts should be written in English. Instructions to authors are in accordance with the text: International Committee of Medical Journal Editors. Uniform requirements for manuscripts submitted to biomedical journals. N Engl J Med 1997; 336:309-15., and with Instructions to authors that can be found on web page: <http://www.icmje.org>.

Submit manuscript in triplicate accompanied by a manuscript on a disk: floppy disk (3.5-inch, 1.44 MB, IBM formatted), or compact disk -CD in generally used word processing formats (MS-Word for Windows is preferred, although manuscripts prepared using any other IBM-compatible word-processor are acceptable) to:

Editorial Office, Acta Clinica Croatica, Sestre milosrdnice University Hospital, Vinogradska 29, HR-10 000 Zagreb, Croatia.

AUTHORSHIP

All persons designated as authors should qualify for authorship, and all those who qualify should be listed. Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. All others who contributed to the work who are not authors should be named in the Acknowledgments. All authors should take responsibility for the integrity of the whole work, from inception to published article. Manuscripts should be accompanied by a covering letter signed by all authors including a statement that the manuscript has not been published or submitted for publishing elsewhere, a statement that the manuscript has been read and approved by all the authors, and a statement about any financial or other conflict of interest. A statement of copyright transfer to the journal must accompany the manuscript.

PREPARATION OF MANUSCRIPT

Type or print out the manuscript on white bond paper ISO A4 (212 × 297 mm), with margins of 35 mm. Type or print on only one side of the paper. Use double spacing throughout, including the title page, abstract, text, acknowledgments, references, individual tables, and legends. Number pages consecutively, beginning with the title page. Put the page number in the lower right-hand corner of each page.

The text of manuscript should be divided into sections: Title page, Abstract and Key words, Introduction, Methods, Results, Discussion, Acknowledgment, References, Tables, Legends and Figures.

Title page

The title page should carry: the title of the article (which should be concise but informative) and a short running title of the manuscript; full name of author(s), with academic degree(s) and institutional affiliation; the name and address of the author responsible for correspondence about the manuscript including his/her E-mail address.

Abstract and Key Words

The second page should carry an abstract (of no more than 250 words). The abstract should state the purposes of the study or investigation, basic procedures, main findings, and the principal conclusions. It should emphasize new and important aspects of the study or observations. Below the abstract authors should provide 3 to 10 key words or short phrases that will assist indexers in cross-indexing the article and may be published with the abstract. Terms from the Medical Subject Headings (MeSH) list of Index Medicus should be used for key words.

Introduction

State the purpose of the article and summarize the rationale for the study or observation. Give only strictly relevant references and do not include data or conclusions from the work being reported.

Methods

Describe selection and identify all important characteristics of the observational or experimental subjects or laboratory animals clearly. Specify carefully what the descriptors mean, and explain how the data were collected. Identify the methods, apparatus with the manufacturer's name and address in parentheses, and procedures in sufficient detail to allow other workers to reproduce the results. Provide references to established methods and statistical methods used. Describe new or substantially modified methods, give reasons for using them, and evaluate their limitations. Identify precisely all drugs and chemicals used. Use only generic name of drugs. All measurements should be expressed in SI units.

Ethics

Papers dealing with experiments on human subjects should clearly indicate that the procedures followed were in accordance with the ethical standards of the institutional or regional responsible committee on human experimentation and with the Helsinki Declaration of 1975, as revised in 1983. Never use patients' names, initials, or hospital numbers, especially in illustrative material. Papers dealing with experiments on animals should indicate that the institution's or a national research council's guide for the care and use of laboratory animals was followed.

Statistics

Describe statistical methods with enough detail to enable a knowledgeable reader with access to the original data to verify the reported results. Whenever possible, quantify findings and present them with appropriate indicators of measurement error or uncertainty. Specify any general-use computer programs used.

Results

Present your results in logical sequence in the text, tables, and illustrations. Do not repeat in the text all the data in the tables or illustrations; emphasize or summarize only important observations.

Discussion

Emphasize the new and important aspects of the study and the conclusions that follow from them. Do not repeat in detail data or other material given in the Introduction or the Results section. Include in the Discussion section the implications of the findings and their limitations, including implications for future research, but avoid unqualified statements and conclusions not completely supported by the data. Relate the observations from your study to other relevant studies. State new hypotheses when warranted, but clearly label them as such.

Tables

Type or print out each table with double spacing on a separate sheet of paper. Do not submit tables as photographs. Number tables consecutively in the order of their first citation in the text and supply a brief title for each. Give each column a short heading.

Figures

Figures and illustrations should be professionally drawn and photographed. Make sure that letters, numbers, and symbols should be legible even when reduced in size for publication. Each figure should have a label pasted on its back indicating the number of the figure, author's name, and top of the figure. Figures should be numbered consecutively according to the order in which they have been first cited in the text. If

photographs of people are used, either the subjects must not be identifiable or their pictures must be accompanied by written permission to use the photograph. All illustrations and figures could be submitted on disks: floppy disk (3.5-inch, 1.44 MB, IBM formatted), or compact disk – CD in appropriate, generally used picture formats. The preferred formats are JPEG and TIFF, although any format in general use that is not application-specific is acceptable. Make sure that minimum resolution should be 300 dpi. Up to two color illustrations are acceptable for each manuscript free of charge.

Abbreviations

Use only standard abbreviations. The full term for which an abbreviation stands should precede its first use in the text unless it is a standard unit of measurement.

Acknowledgments

List all contributors who do not meet the criteria for authorship, such as a person who provided purely technical help, writing assistance, or a department chair who provided only general support. Financial and material support should also be acknowledged.

References

References should be numbered consecutively in the order in which they are first mentioned in the text. Identify references in text, tables, and legends by Arabic numerals in superscript.

References should be cited in the style based on the formats used by the Index Medicus. The titles of journals should be abbreviated according to the style used in Index Medicus (<http://www.nlm.nih.gov>).

References to papers accepted but not yet published should be designated as "in press". Authors should obtain written permission to cite such papers as well as verification that they have been accepted for publication.

Examples of reference citations are listed.

EDITORIAL PROCESS

After submission of the manuscript, the author may receive a letter confirming manuscript receipt. All manuscripts received are anonymously sent to at least two reviewers. *Acta Clinica Croatica* is committed to promote peer review quality and fairness. The reviewers are asked to treat the manuscript with confidentiality. Authors are welcome to suggest up to five potential reviewers for their manuscript (excluding co-authors or collaborators for the last three years), or to ask for the exclusion of reviewer(s) and the reasons for it. The Editorial Board may or may not accept authors' suggestions regarding reviewers. Usually one to three months after submission the authors will receive the reviews. Generally, the instructions, objections and requests made by the reviewers should be closely followed. The authors are invited to revise their manuscript in accordance with reviewers' suggestions, and to explain amendments made in accordance with the reviewers' requests. The articles that receive more than one reviewers' recommendations for "major review" are sent, after revision to the same reviewer, who makes the final recommendation about the revised article. Based on reviewers' suggestions and recommendations, the Editorial Board makes final decision about acceptance of submitted article. Authors may receive a letter confirming the acceptance of submitted article for publication. Corresponding author will receive page-proof version of article to make final corrections of possible printing errors. The authors will receive 20 free reprints of the published paper free of charge.
