

INTRODUCTION

Dear Readers,

we are proud to present the new issue of the international journal Education for Entrepreneurship. This number includes selected articles from the 7th International Conference on Entrepreneurial Learning, whose main theme was innovation and entrepreneurship: digital competencies and entrepreneurial skills.

Innovation and digital competencies in entrepreneurship are contemporary because any company that wants to be competitive in modern business conditions needs to be innovative and adapt to the technology that is being developed and applied. We encounter the situation where enterprises that do not possess tangible assets are leaders in their field, just because of the innovativeness they have built into the production or sale of products or provision of services. As far as innovative thinking about entrepreneurship education is concerned, it is of special importance because it is now necessary to think about the knowledge and competencies that future jobs will require.

This journal issue is intended for everyone thinking about and dealing with entrepreneurship, but also for all those who intend to do so. Also, this issue of journal gives a special contribution to the academic and professional community by increasing the total theoretical and empirical knowledge about innovation and digital competencies in entrepreneurship.

Furthermore, a special thanks to the authors, members of editorial board, reviewers and to all other contributions involved in realization of this issue of the journal.

We hope you recognize the effort and work which have been invested and we invite you to submit your work for the future editions of the Education for Entrepreneurship journal.
