

## SISCIAN ISSUES OF CONSERVATOR AVGG ANTONINIANI FOR DIOCLETIAN AND MAXIMIAN

*The comprehensive list of the issues of antoniniani CONSERVATOR AVGG for Emperors Diocletian and Maximian in Siscia mint is presented. Many rare and unpublished varieties are illustrated. Analysis of mint production for this issue indicates well organized activity of all workshops.*

### Introduction

In the continuation of our interest in the tetrarchic issues of antoniniani from Siscia mint<sup>1,2</sup> we noticed that although the commonest reverse type in Siscia, antoniniani with the obverse CONSERVATOR AVGG for Diocletian and Maximian are not presented in numismatic literature in sufficient detail. The specialized numismatic literature of the period of the tetrarchy, RIC<sup>3</sup>, Šipuš<sup>4</sup> and Gricourt<sup>5</sup> inadequately cover this material, and recent attempt to organize material and variants is also rather short.<sup>6</sup> The most detailed corpus is published by Voetter<sup>7</sup> almost one hundred years ago. Voetter had produced a remarkable reference, which is based on a study of the holdings of the Kunsthistorische Museum in Vienna, as well as important private collections. However, this reference lacks illustrations (which is a standard in modern numismatics) and many new variants discovered since which are presented in this paper.

All specimens with photos available to authors (737 in total) are analyzed and numismatic material systematically organized. Some photos of coins which we have on files were not taken into account due to the poor state of preservation and inability to fully determine all legends. This is particularly important for determination of the position of dots (•) in exergual mintmarks. Several coins, although partially hidden by

<sup>7</sup> Otto Voetter, Paul Gerin, Die Münzen der Römischen Kaiser, Kaiserinnen und Caesaren von Diocletianus bis Romulus 284-476. Katalog der hinterlassenen Sammlung und Aufzeichnung des Herrn Paul Gerin, Wien, 1921.

other coins (which were sold on auctions in group lots) are still illustrated, but only these for which legends could be determined without any doubts. Coinage covered in this article (192 variants) are given only briefly in RIC V/II in thirteen entries (7 for Diocletian, RIC 259-265 and 6 for Maximian RIC 575-582). Due to the volume of examined material, only specimens known to authors in one or two pieces are illustrated, whereas photos of more common pieces are not given in tables. In the process of study, new variants not listed by Voetter were found, and also some of the variants listed by Voetter could not be confirmed due to lack of photographs. It may be that some of these unconfirmed coins are actually errors in his publication, but these Voetter's entries are still kept in the listing.

Interesting detail on these coins is the incorporation of words IOVI and HERCVLI into the mintmarks, nicknames of Diocletian (Emperor Iovius) and Maximian (Emperor Herculius). These words are split into I/O/BI and HP/KOY/LI and added to officinae marks, and in such way creating codewords. Famous Viennesse numismatics Joseph van Kolb, was the first to notice this secret meaning in 1872.<sup>8,9,10</sup> The introduction of these codewords, coupled with dots enormously enlarges the number of possible mintmark variants.

Gricourt has attributed all CONSERVATOR AVGG coins to S-IIe emission, which is dated in January-February 287 period. This issue is further divided into three groups, and Siscia mint struck them in three officinae (workshop letters A, B or G). Group 1 has the exergual mark value followed by usual workshop letters (XXIA-B-G), Group 2 has workshop letters separated by points (XXI•A-B-G•) and Group 3 has workshop letters juxtaposed with the letters I or HP, O or KOY, BI or LI, in turn separated or not by points (XXIA•I•, XXIAHP, XXIA•HP•, XXIB•O•, XXIBKOY, XXIB•KOY•, XXI•BI•, XXIG•LI•). Date of the burial of the Venera hoard in 287 and small number of coins of this type (only 9) affects this classification, as suggested by Estiot, who recognizes at least two phases. The early phase is with XXIA-G mintmarks.<sup>11</sup> Besides regular coins, there are some interesting irregular pieces, hybrids and die-engravers errors<sup>12,13,14</sup> which are characteristic for the earlier phase of the emission.

When material is divided into Gricourt's extended number of groups and given in tabulated form (Tables 1 and 2) some information on mint production and practices could be obtained. Firstly, there is an even output among three workshops and number of coins for Maximian (388 pieces) is larger than for Diocletian (349).

- Group 1: XXIA-G
- Group 2: XXI•A-G•
- Group 3: XXIA-G IOBI or HRKOYLI + dots •
- Group 4: A-GXXI IOBI or HRKOYLI + dots •
- Group 5: -/A-G//XXI IOBI or HRKOYLI + dots •
- Group 6: A-G/-//XXI IOBI or HRKOYLI + dots •

Figure 1 depicts distribution of material according to the groups. Early part of emission represents groups G1+G2, whereas the following phase is divided into groups G3+G4 and G5+G6. It could be seen that smaller volume of coins was produced in the early phase (9.0%), whereas IOBI/HRKOLI series bearing workshop marks in the field (groups G5+G6) are the largest (56%). There is no significant difference in numbers for two emperors, with the exception of groups G1+G2 where coins of Diocletian are more abundant, which is probably associated with the initial larger mint production for the senior emperor.

Figure 1.

The largest number of coins has emperors depicted with bust right, radiate and cuirassed (bust type B1), whereas the most common obverse inscriptions are those with the longest legends IMP C C VAL DIOCLETIANVS P F AVG and IMP C C VAL MAXIMIANVS P F AVG. Bust types with naked portraits (bust types A) are produced only for Maximian, and the busts facing to the left are much less common or exceptions for both emperors. The variety of combinations of obverse inscription / bust types is larger for Maximian, and his coinage includes many hybrids and mint errors, whereas only one hybrid specimen (no. 64) was found for Diocletian.

## Catalogue

### Reverse types

#### **Diocletian**

Type D1. Emperor on left standing right holding scepter in left, Jupiter on right standing left, each holding patera, both sacrificing at altar between them. (RIC 259-265)

#### **Maximian**

Type M1. Emperor on left standing right holding scepter in left, Hercules on right standing left leaning on a club in left, both sacrificing at altar between them. (RIC 575-581)

Type M2. Emperor on left standing right holding scepter in left, Hercules on right standing left holding club and lion skin in left, both sacrificing at altar between them. (RIC 582)

#### **Hybrids**

Type D1h. Emperor on left standing right holding scepter in left, Hercules on right standing left leaning on a club in left, both sacrificing at altar between them. (RIC -)

Type M1h. Emperor on left standing right holding scepter in left, Jupiter on right standing left, each holding patera, both sacrificing at altar between them. (RIC -)
