This is a catalogue of 59 *histamenoí* of the Byzantine emperor Romanos III Argyros in the Numismatic Cabinet of the Archaeological museum in Split. It should be attached to the author's article published in the VAHD 87-89/1994-1996, p. 305-334.

The provenance of these coins is mostly unknown. There is a hoard from Klobuk near Ljubuški containing 23 *histamenoí*. Single pieces are registered in Zagvozd, Čaporice, Dugopolje and the surroundings of Narona. The author draws attention to the number of dots in loros - 8 or 6 or 5 or 4 or even 3 dots, that is a unique example so far. The diameter of these coins ranges from 23.5 - 25 mm, and their weight ranges from 4.31 - 4.40 gr. The dies of the coins are marked with the letters A-Z/A-O/O and the die analyze show 39 different dies.

Ovo je katalog 59 primjeraka histamena bizantskog cara Romana III Argyrosa koji se čuvaju u Numizmatičkom kabinetu u Arheološkom muzeju u Splitu. On je dio autorovog članka objavljenog u VAHD 87-89/1994-96, str. 305-334.

Podaci o nalazištima novca su dosta skromni: jedna je ostava od 23 komada iz Klobuka kod Ljubuškoga, a pojedinačni nalazi su iz Zagvozda, Čaporica, Dugopolja i okolice Narone. U obradi novca autor je upozorio na broj točaka u lorosu i tako ga prikazao počevši od onih primjeraka gdje se u lorosu javlja osam ili šest ili pet ili četiri ili čak tri točke, što bi zasad bio jedinstveni primjerak. Glede veličine i težine može se kazati da je u splitskom fundusu najveći broj onih novaca kojima je promjer između 23,5 do 25 mm, dok im je težina većinom između 4,31 do 4,40 gr. Glede žigova za izradu ovih novaca, koje je autor označio slovima A-Z/A-O/O, može se pretpostaviti da se radi o 39 međusobno različitih kalupa.

1 The number of the notes refers to the numbers in the catalogue. - Since in the cited literature the abbreviation symbols are not always given (abbreviations or ligatures), attention will be drawn first to the number of dots in the loros, and afterwards to the other characteristics (axis, abbreviations, etc.).
BNP 43/CP/07.

2 DOC 1 b. 10; the representation of the Virgin Mary is close to those with 5 or 4 dots in the loros.
