Krasniqi, E., Berisha, N., Millaku, F. & Rexhepi, F.: Contribution to the knowledge on the flora of Mt Golesh, central Kosovo. *Nat. Croat., Vol. 28, No. 2., 423-440, Zagreb, 2019.*

This paper presents the results of a detailed floristic study conducted during three consecutive years (2015-2017) in the central part of Kosovo, in the mountain of Golesh. The studied mountainous area is unique by reason of its ecosystems and has a high degree of diversity of regional flora. Because of its specific harsh environment the area as a whole contains a considerable amount of endemic and rare plant taxa. Therefore, the flora of different habitats of the area has been properly investigated and must be adequately protected. All recorded taxa in this study correspond to the collected voucher specimens. Conservation statuses for endangered taxa were also proposed based on the relevant literature data. As a result of the research, 62 families, 199 genera, and 295 taxa (species and infraspecific taxa) of vascular plants were recorded, including eight endemic plant taxa and, in total, twelve endangered plant taxa. Growing on Mt Golesh are one critically endangered (*Klasea radiata*), three endangered (*Narcissus poeticus* subsp. *radiiflorus*, *Haplophyllum boisserianum* and *Daphne cneorum*), two vulnerable (*Centaurea albertii* and *Galatella albanica*), two near threatened (*Paramoltkia doerfleri* and *Potentilla visianii*) and four least concern plant taxa (*Halacsya sendtneri*, *Linum flavum*, *Forsythia europaea* and *Polygala doerfleri*), indicating that this area has a high conservation value and the necessity for research.

Key words: conservation, endemism, serpentine flora, plant systematics

Krasniqi, E., Berisha, N., Millaku, F. & Rexhepi, F.: Prinos poznavanju flore planine Golesh, središnje Kosovo. *Nat. Croat., Vol. 28, No. 2., 423-440, Zagreb, 2019.*

Rad predstavlja rezultate detaljnog florističkog istraživanja provedenog tijekom tri uzastopne godine (2015-2017) na planini Golesh u središnjem dijelu Kosova. Proučavano planinsko područje je jedinstveno zbog svog ekosustava i i posjeduje veliki stupanj raznolikosti regionalne flore. Zbog oštih uvjeta okoliša na tom području raste značajan broj endemskih i rijetkih vrsta. Stoga je flora različitih staništa tog područja dobro istražena i mora biti adekvatno zaštićena. Sve zabilježene svojite ovog rada imaju i dokaz u prikupljenim primjercima. Za sve ugrožene svojite na temelju relevantnih literaturnih podataka predlaže se zaštita. Kao rezultat istraživanja zabilježene su 62 porodice, 199 rodova i 295 svojiti (vrste i podvrste) vaskularnih biljaka, uključujući osam endemskih i 12 ugroženih svojiti. Na planini Golesh raste jedna kritično ugrožena (*Klasea radiata*), tri ugrožene (*Narcissus poeticus* subsp. *radiiflorus*, *Haplophyllum boisserianum* i *Daphne cneorum*), dvije osjetljive (*Centaurea albertii* i *Galatella albanica*), tdvije skoro ugrožene (*Paramoltkia doerfleri* i *Potentilla visianii*) i četiri najmanje zabrinjavajuće svojite (*Halacsya sendtneri*, *Linum flavum*, *Forsythia europaea* i *Polygala doerfleri*), što pokazuje vrijednost zaštite ovog područja i potrebu njegovog istraživanja.

Ključne riječi: zaštita, endemizam, serpentina flora, biljna sistematika

INTRODUCTION

The mountain of Golesh (with a surface area of 22.2 km²) belongs to the central mountain chain of Carraleva Mountains in Kosovo (MARKOVIĆ, 1990) and its highest peak rises 1019 m above sea level (a.s.l). It is the highest mountain system in the central part of Kosovo (ÇAVOLLI, 1997). Most of this mountain area (70%)

* corresponding author: naim.berisha@uni-pr.edu

is located at altitudes from 600 to 980 m a.s.l. – while the upper part reaches the altitude of more than 980 m a.s.l. Golesh is known as a massif predominantly made out of harzburgite rock (which consists mainly of two minerals: olivine and low calcium peroxine) and a high percentage of ultramafic (serpentinite) bedrock (SAHITI, 2010; LABUS, 1973). This composition represents a challenging environment in chemical, physical and biotic terms for plants to grow and develop in drought, the presence of heavy metals and limited sources of basic nutrients (HERATH *et al.*, 2014; BERISHA *et al.*, 2014; REXHEPI *et al.*, 2012; KAZAKOU *et al.*, 2008; MILLAKU *et al.*, 2008; KRUCKEBERG, 2006; KRASNIQI & MILLAKU, 2007). From the pedological aspect, the surveyed area is made of loamy deluvium, brownized red soil on compact limestone, reddish-brown loamy soil on reddish sediments and moderately deep brown soil on metamorphic rocks (PAVIĆEVIĆ *et al.*, 1974).

In climatic terms, the studied site is characterized by harsh cold winters and dry and hot summers – with average annual temperature of 10° C (Çavolli, 1997). Warmest months are July and August with the average temperature reaching 21°C, while the coldest month is January with an average temperature of –1.5° C, making it a typical continental climate (ANON., 2018).

For Mt Mt Golesh 144 taxa of vascular plants were reported (KRASNIQI *et al.*, 2015). Although REXHEPI (1979, 1985) recorded c. 139 plant taxa in the Mt Golesh area, detailed floristic research as well as research on endemics is still in progress (MILLAKU *et al.*, 2017) and new records for the distribution of plant taxa were made during our taxonomic revision of the given studied area.

Still, not a single study has ever been published concerning the floristic diversity of Mt Golesh, offering any plant list. The whole mountain stretches 5.5 km from south to north and 5.4 km from its western point to the eastern side along the municipalities of Fushë-Kosova, Drenas and Lipjan.

The most vital zone from the biodiversity point of view is the upper part of the mountain (around the antenna – a triangle between points: 9, 11, 14 and 24 from Tab. 1), where the habitats of endangered plant taxa are located. In this study, we have made efforts to review the biodiversity situation by listing all the sampled plant taxa. We aimed to **a)** compile a detailed list of all present taxa; **b)** review the threat status of all rare and endangered plant taxa present in this mountain; and **c)** provide accurate data concerning their overall distribution across the mountain. An accurate identification of plant taxa was based on the collected herbarium specimens, which were used as unique evidence and crucial reference material for the regional distribution. To achieve our objective of reviewing the conservation status of the endemic and endangered taxa present, we relied on the data provided by the Red Book of Vascular Flora of the Republic of Kosovo (MILLAKU (ed.), 2013).

MATERIAL AND METHODS

We conducted our field surveys at 50 sites, starting from April to September in three consecutive years 2015-2017 (Tab. 1). A total of approximately 150 sampling sites were visited. Sites were selected randomly, ensuring that no particular portion of the sampling frame was either favoured or overlooked. In order for us to cover

all different types of habitats at different elevations and expositions, we sampled plots from forests, shrubs as well as grasslands (starting from 648 m a.s.l. to 999 m a.s.l.). Life forms as well as their chorological spectrum follow PIGNATTI (1982), DIMOPOULOS et al. (2013) and RAUNKIAER (1934). Plots as shown in Tab. 1 in many cases included several nearby localities within the given site.

The plant species nomenclature followed the Euro Med Checklist (EURO+MED, 2006). All the collected herbarium materials were identified based on the Flora Europaea (TUTIN et al., 1964 - 1980), Flora of Albania (PAPARISTO et al., 1988; QOSJA et al., 1992-1996; VANGJELI et al., 2000), Flora of Serbia (JOSIFOVIĆ (ed.), 1970-1977; STEVANOVIĆ (ed.), 2012; SARIĆ & DIKLIC (eds.), 1986), Flora of Bulgaria (JORDANOV et al., 1963-1979; VELČEV et al., 1982), Flowers of Greece and the Balkans (POLUNIN, 1980) and Baumführer Europa (SPOHN, 2011). Collected plants were processed into voucher specimens and deposited in the herbarium of the Faculty of Natural Sciences and Mathematics, University of Prishtina.

RESULTS AND DISCUSSION

In this study we determined the vascular plant diversity of Mt Golesh. The collected plants belong to 62 families, 199 genera and 295 taxa (species and infraspecific units) - (App. 1). Families with the highest number of taxa were Asteraceae (34 taxa), Fabaceae (25 taxa), Rosaceae (21 taxa), Poaceae and Caryophyllaceae (each 18 taxa).

Within the investigated region we recorded eight endemic taxa, out of which six are Balkan endemics (*Halacsya sendtneri* (Boiss.) Dörfl., *Paramoltkia doerfleri* (Wettst.) Greuter & Burdet, *Linum flavum* L., *Forsythia europaea* Degen & Bald., *Polygala doerfleri* Hayek, *Potentilla visianii* Pančić, *Haplophyllum boisserianum* Vis. et Pančić and *Daphne cneorum* L.) and two are stenoendemic taxa for Kosovo (*Centaurea albertii* Rexhepi and *Galatella albanica* Degen). We also recorded and evaluated 12 endangered taxa. (App. 1, Tab. 2, App. 2 & Fig. 1).

Tab. 2. List of endemic and endangered plant species recorded in the studied area of Golesh.

No	Family name	Scientific name	Status note
1.	Amaryllidaceae	<i>Narcissus poeticus</i> subsp. <i>radiiflorus</i> (Salisb.) Baker.	Endangered
2.	Asteraceae	<i>Centaurea albertii</i> Rexhepi	Vulnerable Stenoendemic
3.	Asteraceae	<i>Galatella albanica</i> Degen	Vulnerable Stenoendemic
4.	Asteraceae	<i>Klasea radiata</i> (Waldst. & Kit.) Á. Lö. & D. Lö.	Critically Endangered (New locality)
5.	Boraginaceae	<i>Halacsya sendtneri</i> (Boiss.) Doerfl.	Least Concern Endemic
6.	Boraginaceae	<i>Paramoltkia doerfleri</i> (Wettst.) Gre. & Burd.	Near Threatened Endemic
7.	Linaceae	<i>Linum flavum</i> L.	Least Concern
8.	Oleaceae	<i>Forsythia europaea</i> Degen & Bald.	Least Concern Endemic
9.	Polygalaceae	<i>Polygala doerfleri</i> Hayek	Least Concern Endemic
10.	Rosaceae	<i>Potentilla visianii</i> Pančić	Near Threatened Endemic
11.	Rutaceae	<i>Haplophyllum boisserianum</i> Vis. et Panc.	Endangered Endemic
12.	Thymelaceae	<i>Daphne cneorum</i> L.	Endangered

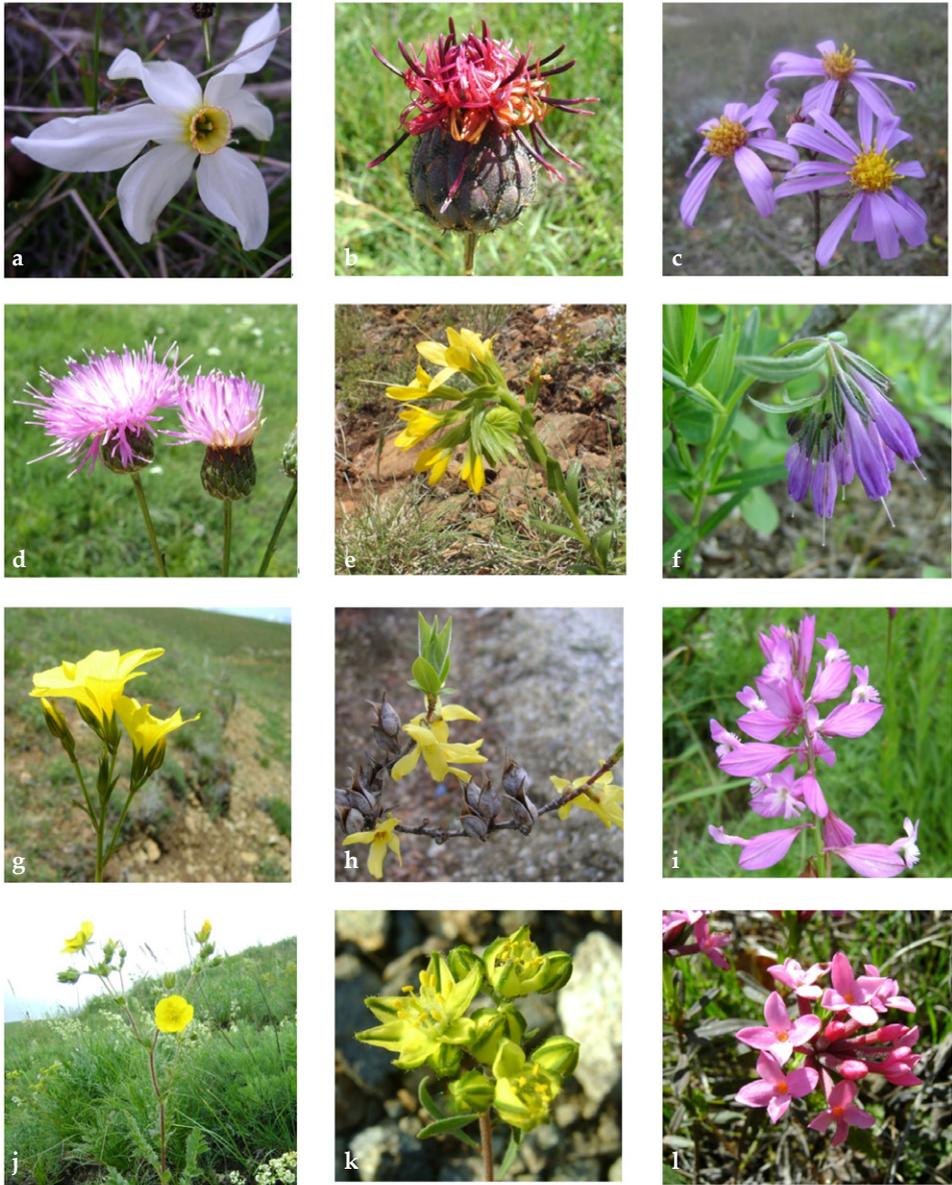

Fig. 1. a) *Narcissus poeticus* subsp. *radiiflorus* (Salisb.) Baker., b) *Centaurea albertii* Rexhepi, c) *Galatella albanica* Degen, d) *Klasea radiata* (Waldst. & Kit.) Á. Löve & D. Löve, e) *Halacsya sendtneri* (Boiss.) Doerfl., f) *Paramoltkia doerfleri* (Wettst.) Greuter & Burd., g) *Linum flavum* L., h) *Forsythia europaea* Degen & Bald., i) *Polygala doerfleri* Hayek, j) *Potentilla visianii* Pančić, k) *Haplophyllum boissertianum* Vis. et Pančić, l) *Daphne cneorum* L.

On these unique serpentinite-base grassland habitats we registered the presence of the following eight endemic plant taxa (Tab. 2): *Centaurea albertii* Rexh., *Galatella albanica* Degen., *Halascya sendtneri* (Boiss.) Dörf., *Paramoltkia doerfleri* (Wettst.) Gre. & Burd., *Forsythia europaea* Degen & Bald., *Polygala doerfleri* Hayek., *Potentilla visianii* Pančić and *Haplophyllum boisserianum* Vis. et Panč.

Additionally, *Narcissus poeticus* subsp. *radiiflorus* (Salisb.) Baker., *Klasea radiata* (Waldst. & Kit.) Á. Löve & D. Löve, *Linum flavum* L. and *Daphne cneorum* L. are all listed in the Red Data Book of Vascular Flora of Kosovo. They are characterized generally with a wider distribution in the mountains, but their habitats are limited to certain areas and ecological niches. Their populations mostly consisted of very few mature individuals in each habitat and their habitats are considered vulnerable to being negatively affected by the human factor. Our investigation shows that 12 taxa recorded in this survey are under a certain threat category or level (Tab. 3). Among them, *Klasea radiata* is a Critically Endangered (CR) species, *Narcissus poeticus* subsp. *radiiflorus*, *Haplophyllum boisserianum* and *Daphne cneorum* are Endangered (E) species, *Centaurea albertii* and *Galatella albanica* are Vulnerable (VU) species, *Potentilla visianii* and *Paramoltkia doerfleri* are Near Threatened (NT) species, while *Linum flavum*, *Polygala doerfleri*, *Forsythia europaea* and *Halascya sendtneri* are categorized in the Least Concern (LC) threat category – based on IUCN Red List criteria (MILLAKU (ed.), 2013).

The flora is dominated by the European floral element (79 taxa), followed by Euro-Asiatic (74), Sub-Mediterranean (34), Balkan (29), Mediterranean (29), Pontic (12) etc. (Fig. 2). The high contribution of European and Euro-Asiatic floristic elements suggests that floristically it was most strongly influenced from the direction of the Alps as well as the Carpathians and Asia Minor (STEVANOVIĆ, 1996). Anyhow, as observed, it is obvious that various floristic elements meet and overlap in these mountain ranges in the central part of Kosovo.

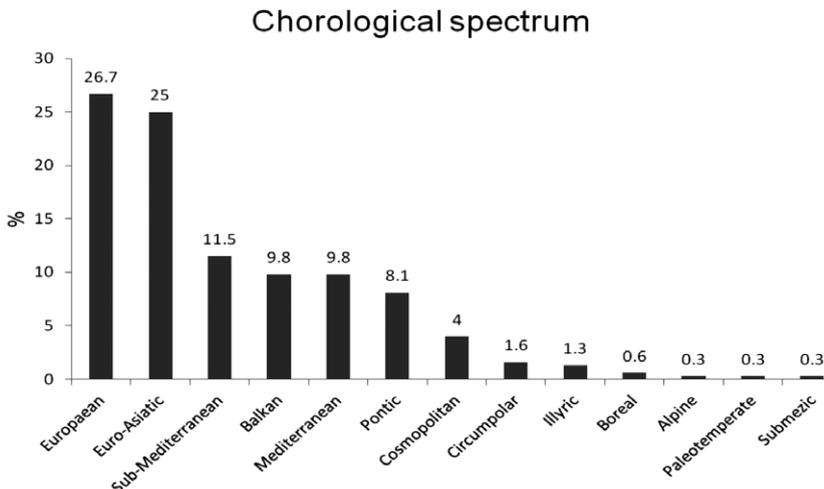

Fig. 2. Chorological spectrum of the total flora from Mt Golesh

Families with the highest number of taxa (Fig. 3) were Asteraceae (12%), Fabaceae (9%), Rosaceae (7%), Poaceae and Caryophyllaceae (6% each).

The data presented about endemic and endangered taxa, as well as their conservation status based on literature sources and proven on site with our results, strongly confirm the importance that this mountain has for Kosovo's floristic biodiversity. Altogether eight taxa were endemic (2.7%), and 12 were endangered (4%).

The life-form spectrum indicates the predominance of Hemicryptophytes (153 taxa, 53%), with a relevant presence of Geophytes (45 taxa, 15%), Phanerophytes (34 taxa, 12%) and Therophytes (34 taxa, 12%) (Fig. 4).

Spectrum of plant families

CONCLUSIONS

Mt Golesh represents a typical hilly to mountainous landscape of mosaic plant assemblages and diversity, with high presence of serpentinite bedrock of the massif. This detailed floristic documentation of 295 taxa, 199 genera and 62 plant families represents an important contribution towards the knowledge of flora of the Kosovo.

It was noticed that certain endemic taxa are very fragile here and the area is heavily disturbed by humans as well as by grazing animals. At the very top of the mountain there is a military compound and near its border fences (N & S) we noticed the presence of natural habitats for *Centaurea albertii* Rexhepi – a stenoendemic plant taxon. We suggest that this area (Tab. 1, area between collections sites no. 24, 35 and 48) should be protected and also we point out the need for increasing the general awareness of local people about the importance of conserving this environment.

From the floristic point of view, Golesh is particularly important due to the presence of eight endemic taxa, twelve endangered taxa and the outstanding diversity of its flora. Additionally, natural habitats of *Forsythia europaea* here represent the northernmost natural distributional limit of the endemic taxon.

The habitat of the stenoendemic *Galatella albanica* is characterized by a very fragile population consisting of very few mature individuals that are also naturally isolated. It was recorded on the serpentinite grasslands of the eastern slope – and taking into the account also the information of the taxa overall distribution and its threat situation in Kosovo, it should remain protected by law (already listed in the Red Book of Vascular Flora of the Republic of Kosovo - VU).

Haplophyllum boisserianum is an endangered plant taxon in Kosovo. Because of our detailed floristic research into this area we recorded a new locality of its natural distribution. for *H. boisserianum* was growing on dry serpentine grasslands of the western slopes of Mt Golesh.

The results of this work will considerably support the conservation activities of the flora as well as natural habitats in Kosovo and additionally will update the floristic database concerning the composition and general distribution of plant taxa.

ACKNOWLEDGMENTS

The authors gratefully thank botany students Ramiz Kozhani, Gazmend Hoti, Shpresa Gashi, Mimosë Paçarizi, Sahit Kastrati and Gëzim Gjoshi for their supports in performing this survey in the field. The authors are grateful to Habije Krasniqi for the technical assistance in finalizing the work. We would like to thank the two anonymous reviewers for their careful reading of our manuscript and many insightful comments and suggestions.

Appendix I. Floristic composition of Golesh with distribution & conservation notes

Nr.	Life form	Family Taxon	Conservation note	Herbarium no. / (Habitat type & Expositions on site)	Floristic element
Aspleniaceae					
1.	H	<i>Asplenium adiantum-nigrum</i> subsp. <i>serpentini</i> (Tausch) Heufl. [<i>Asplenium cuneifolium</i> Viv.]	\	GOL005 / (Forest & forest clearings)	EUR
2.	H	<i>Asplenium ceterach</i> L. [<i>Ceterach officinarum</i> DC.]	\	GOL006 / Forest & shrubs (N, E, W, S)	EUA
3.	Ch(H)	<i>Asplenium septentrionale</i> L. Hoffman.	\	GOL007 / Rocky pastures (N, E)	EUA
4.	H	<i>Asplenium trichomanes</i> L.	\	GOL008 / Forest / on rocks. (W)	EUA
Polypodiaceae					
5.	Ch	<i>Polypodium vulgare</i> L.	\	GOL073 / (Forest & forest clearings)	EUA
Cupressaceae					
6.	P	<i>Juniperus communis</i> L.	\	GOL056 / Forest & shrubs (N, E, W, S)	CRP
7.	P	<i>Juniperus oxycedrus</i> L.	\	GOL057 / Forest & shrubs (N, E, W, S)	MED
Araceae					
8.	G	<i>Arum maculatum</i> L.	\	GOL029 / Forest & shrubs (N, E, W, S)	EUA
Colchicaceae					
9.	G	<i>Colchicum autumnale</i> L.	\	GOL119 / Grasslands (N, E, W, S)	EUR
Liliaceae					
10.	G	<i>Erythronium dens-canis</i> L.	\	GOL125 / (Forest & forest clearings)	EUR
11.	G	<i>Fritillaria mesanensis</i> Raf.	\	GOL126 / Grasslands (N, E, W, S)	EUR
12.	G	<i>Tulipa sylvestris</i> L.	\	GOL127 / Grasslands (N, E, W)	MED
Asparagaceae					
13.	G	<i>Asparagus tenuifolius</i> Lam.	\	GOL088 / (Forest & forest clearings)	MED
14.	G	<i>Convalaria majalis</i> L.	\	GOL084 / (Forest & forest clearings)	SMD
15.	G	<i>Muscari botryoides</i> (L.) Miller.	\	GOL092 / Grasslands (W)	SMD

16.	G	<i>Muscari comosum</i> (L.) Mill.	\	GOL098 / Forest & forest clearings, rocky grasslands (E)	EUR
17.	G	<i>Muscari racemosum</i> (L.) Lam. et DC.	\	GOL111 / Forest & shrubs, rocky grasslands (N, E, S)	MED
18.	G	<i>Ornithogalum pyramidale</i> L.	\	GOL156 / Grasslands (E)	EUR
19.	G	<i>Ornithogalum umbellatum</i> L.	\	GOL157 / Forest & shrubs (N, E, S, W)	EUR
20.	G	<i>Polygonatum odoratum</i> (Mill.) Druce	\	GOL161 / (Forest & forest clearings)	EUA
21.	G	<i>Prospero autumnale</i> (L.) Speta [<i>Scilla autumnalis</i> L.]	\	GOL107 / Grasslands (N, E, S, W)	MED
22.	G	<i>Scilla bifolia</i> L.	\	GOL033 / Forest & forest clearings	MED
Orchidaceae					
23.	G	<i>Anacamptis morio</i> (L.) R. M. B. Pr. & M.W. Ch. [<i>Orchis morio</i> L.]	\	GOL231 / Grasslands (N, E, S, W)	MED
24.	G	<i>Platathera bifolia</i> (L.) L. C. M. Richard.	\	GOL235 / Forest & forest clearings	EUA
Iridaceae					
25.	G	<i>Crocus biflorus</i> Mill.	\	GOL222 / Grasslands (N, E, S, W)	MED
26.	G	<i>Crocus chrysanthus</i> Herb	\	GOL223 / Grasslands (N, E, S, W)	BLK
27.	G	<i>Iris graminea</i> L.	\	GOL224 / Grasslands (N, E)	MED
28.	G	<i>Iris pumila</i> L.	\	GOL225 / Grasslands (E,W)	EUR
29.	H	<i>Iris reichenbachii</i> Heuff.	\	GOL226 / Grasslands (N, S)	BLK
Amaryllidaceae					
30.	G	<i>Allium flavum</i> L.	\	GOL216 / Grasslands (N, E, S, W)	EUA
31.	G	<i>Allium moschatum</i> L.	\	GOL217 / Grasslands (W)	EUR
32.	G	<i>Allium sphaerocephalon</i> L.	\	GOL218 / Grasslands (N, E, S, W)	EUA
33.	G	<i>Narcissus poeticus</i> subsp. <i>radiiflorus</i> (Salisb.) Baker.	EN	GOL219 / Grasslands (E)	EUR
Juncaceae					
34.	G	<i>Luzula forsteri</i> (Sm.) DC	\	GOL163 / Forest & forest clearings. Shrubs. (N, E, S, W)	MED
35.	H	<i>Luzula multiflora</i> (Ehrh.) Lej. [<i>L. campestris</i> L. subsp. <i>multiflora</i> (Reitz.) Buchenau]	\	GOL164 / Grasslands (N, E, S, W)	CSM
Cyperaceae					
36.	H	<i>Carex caryophyllea</i> Latuorr.	\	GOL062 / Grasslands (N, E, S, W)	EUA
37.	G	<i>Scirpoides holoschoenus</i> (L.) Soják [<i>Scirpus holoschoenus</i> L.]	\	GOL063 / Grasslands (N, E, W)	MED
Poaceae					
38.	T	<i>Aegilops triuncialis</i> L.	\	GOL180 / Grasslands (N, E, S, W)	EUR
39.	H	<i>Agropyron cristatum</i> subsp. <i>pectinatum</i> (M. Bieb.) Tzvelev	\	GOL181 / Grasslands (E, S, W)	PAL
40.	H	<i>Brachypodium sylvaticum</i> (Hudson) Beauv	\	GOL182 / Forest & shrubs	EUA
41.	H	<i>Briza media</i> L.	\	GOL183 / Grasslands (N, E, S)	EUA
42.	H	<i>Bromus erectus</i> Huds. subsp. <i>fibrosus</i> (Hack.) Stoj. et Stef.	\	GOL184 / Grasslands (N, E, W)	SMD
43.	T	<i>Bromus squarrosus</i> L.	\	GOL185 / Grasslands (N, E, S, W)	MED
44.	H	<i>Chrysopogon gryllus</i> (L.) Trin.	\	GOL186 / Grasslands (N, E, S, W)	MED
45.	G	<i>Cynodon dactylon</i> (L.) Pers.	\	GOL187 / Grasslands (N, E, S, W)	CSM
46.	H	<i>Dactylis glomerata</i> L.	\	GOL188 / Forest clearings. Grasslands. (N, S)	EUA
47.	G	<i>Elytrigia repens</i> (L.) Nevski [<i>Agropyrum repens</i> (L.) Beauv.]	\	GOL189 / Grasslands (N)	EUA
48.	H	<i>Koeleria macrantha</i> (Ledeb.) Schult. [<i>Koeleria gracilis</i> Pers.]	\	GOL190 / Grasslands (W)	EUA
49.	H	<i>Melica ciliata</i> L.	\	GOL191 / Grasslands. Forests. Shrubs. (N, E, W)	EUR
50.	G	<i>Melica uniflora</i> Retz.	\	GOL192 / Forest & shrubs. (N, E, S, W)	EUR
51.	H	<i>Phleum pratense</i> L.	\	GOL193 / Grasslands. (N, E, S, W)	EUA
52.	H	<i>Poa bulbosa</i> L.	\	GOL194 / Forest clearings. Grasslands. (N, E, S, W)	EUA
53.	T	<i>Sclerochloa dura</i> (L.) Beauv.	\	GOL195 / Grasslands (W)	MED

54.	H	<i>Stipa pulcherrima</i> K. Koch. [<i>S. pennata</i> subsp. <i>mediterranae</i> (Trin. et Rupr.) Asch. et Graebn.]	\	GOL196 / Rocky grasslands (N, E, S, W)	EUR
55.	H	<i>Taenatherum caput-medusae</i> subsp. <i>asperum</i> (Simonk.) Melderis [<i>Hordeum asperum</i> (Simk.) Deg.]	\	GOL197 / Grasslands (N)	EUA
Ranunculaceae					
56.	T	<i>Consolida regalis</i> S. F. Gray.	\	GOL064 / Grasslands (W)	EUR
57.	G	<i>Ficaria verna</i> Huds. [<i>Ranunculus ficaria</i> L.]	\	GOL065 / Forest & shrubs (N, E, S, W)	EUR
58.	H	<i>Helleborus odoratus</i> Waldst. & Kit. ex Willd.	\	GOL066 / Forest & shrubs (N, E, S, W)	SMZ
