Words of editors

ONE HEALTH is a global health and WHO initiative of the 21st century based on creating the framework for interprofessional and transectorial approaches to the health of animals, people and the environment around the world.

Academic institutions provide an optimal platform to enable the implementation of One Health approaches through educational programs, outreach and networking among faculty, students, researchers, industry and regulatory constituents/government to provide collective thought process, local initiatives and global impact on medicine and health of our planet in general.

One Health initiatives around the world gather around one of the very impactful sites: **THE ONE HEALTH COMMISSION.** That organization provides leadership, platforms and resources to connect numerous One Health advocates and groups around the world, allowing them to combine forces to break through disciplinary silos and to re-orient collective thinking and practice towards interactive systems frameworks. It seeks to sustain and expand its programs, to increase its global impact promoting interdisciplinary approaches to health challenges shared by people, animals and the environment. Its goal is to make One Health the default way of operating at all levels of academia, research, and governments around the world.

1st International Meeting One Health in Zadar: Global Approach to Global Health that was held at University of Zadar, Croatia, on June the 3rd 2019.

The meeting was very successful and it gave an opportunity to the participants to attend the lectures and discuss with multidisciplinary approach to different topics connected with ONE HEALTH. It was an occasion for scientists and students from different countries to get together and establish new networks for multidisciplinary researches.
