

***Addendum to article Hernández-Moreno D, et al. Different enzymatic activities in carp (*Cyprinus carpio* L.) as potential biomarkers of exposure to the pesticide methomyl. Arh Hig Rada Toksikol 2014;65:311-8 (DOI: 10.2478/10004-1254-65-2014-2538).***

The authors wish to add the following information to the *Acknowledgements* section of their article:

This research was supported by the Spanish Government within the framework of the project “PCI – Programa de Cooperación Interuniversitaria Túnez-España” (References A/015933/08 and A/024757/09).

***Editor’s note on the addendum***

Considering that this information has been provided after the publication of the article and in no way reflects on its subject, results, and their interpretation, we have agreed to add it separately and make available at our HRČAK repository without further changing its content already published online or in print.
