

Ono što je posebno vrijedno u tom programu popis je transformacijskih parametara između različitih geodetskih datuma. Tako postoje i parametri za transformaciju između još uvijek u Hrvatskoj važećeg datuma s fundamentalnom točkom Hermannskogel blizu Beča, i datuma WGS84. To je posebno od koristi prilikom upotrebe ručnih GPS-uređaja kada zahtijevana točnost nije prevelika (reda veličine 10 metara). Upotrijebljeni model transformacije između datuma zadan je trima parametrima translacije. Parametri između datuma Hermannskogel i WGS84 su: $dx=682$ m, $dy=-203$ m i $dz=480$ m.
