

U sedmom poglavlju, koje je ujedno i zaključak, autorica uočava da je u Hrvatskoj do danas objavljen vrlo malen broj radova koji se bave suvremenom pomorskom kartografijom. Da bi se i Hrvatska približila svjetskim normama, bilo je potrebno razlučiti osnovne pojmove iz toga područja. Pojmovi poput sustava za prikaz rasterskih pomorskih karata (RCDS), informacijskog sustava i prikaza elektroničkih karata (ECDIS), elektroničkih sustava pomorskih karata (ECS), rasterskih pomorskih navigacijskih karata (RNC) i elektroničkih pomorskih navigacijskih karata (ENC) okosnice su terminologije suvremene pomorske kartografije. Njihovo detaljno pojašnjavanje vrlo je važno jer je i među onima koji su kreirali te pojmove bilo nesuglasica i različitih videnja. I danas se velik broj pitanja pomoraca odnosi na razlučivanje službenih i neslužbenih pomorskih navigacijskih karata i načina njihove upotrebe.

Djelo je namijenjeno pomorcima, kartografima, geografima, hidrografima, ali i široj javnosti zainteresiranoj za pomorstvo i more kojim se toliko dičimo. S obzirom na očigledan nedostatak takve i srodne literature u nas, izdavanje ove knjige bilo je sasvim opravdano i društveno potrebno. Autorica je svojim radom dala vrijedan prinos istraživanju terminologije suvremene pomorske kartografije.

Miljenko Lapaine
