Clinical psycho-neuro-endocrine-immunology in practice (PNEI)

Author: Sanja Toljan

The Course, organized by Croatian Academy of Sciences and Arts, Department of Medical Sciences and Orlando Clinic form Zagreb, was held form March 12th – March 15th, 2024. in Zagreb. Participants came from different medical backgrounds, but with the same goal: to study clinical PNEI and to implement it in their everyday medical practice.

Clinical PNEI is relatively new medical branch that has been rarely presented to caregivers, which makes this course very attractive for participants.

The lecturers were medical doctors, but also nutritionists, pharmacists, psychologists and kinesiologists, and the themes that were brought to participants were:

Introduction to Clinical PNEI, Physiology and pathophysiology in clinical PNEI, Diagnostics in PNEI, Therapeutic goals in

PNEI, Neuroplasticity, Circadian rhythm and its clinical importance, Microbiome in clinical practice, Stress management strategies in PNEI, Pharmacotherapy, Anti-inflammatory diet, Physical activity in PNEI, Hormone replacement therapy.

The course also offered case reports, which encoureged participants to take active role in implementation of PNEI approach.

Participants spent most of the time together, going together to healthy lunch, organized by Orlando Clinic, as a reminder of healthy practice, not only for patients, but also for people who provide medical care. "Medice, cura te ipsum", is strongly advised during the course. Medical knowledge taught in Course, is strongly advised to caregivers to heal themselves, and as healthy persons, easily can provide authentic medical care to complicated and complex pathologies.
