

## EDITORIAL

Dear Friends and Colleagues,

Readers are presented with another issue of the international scientific journal *Inter EU Law East*, which this time also provides an overview of recent scientific research and analysis in the field of law and economics. The Journal continues its mission of connecting legal and economic perspectives in the context of European integration, globalization and growing regulatory and market challenges.

In this issue, we were faced with an extremely rich response from the scientific and professional community and a large number of quality papers, among which it was necessary to choose those that we felt would present the readers with current issues and approaches in an interdisciplinary framework in the most representative way. The selected papers cover diverse and contemporary topics: from the impact of government support on international trade, through issues of corporate governance and labor law, all the way to economic and legal aspects of sustainability, the real estate market and fiscal policy.

We especially point out that this issue also includes papers dealing with the legal challenges of digital transformation, as well as ESG standards - topics that are increasingly shaping the regulatory landscape of the European Union and the global business environment. Digitization and sustainability are no longer just strategic goals, but become binding frameworks within which economic activities and legal regulation take place. Precisely for this reason, scientific contributions that critically reflect on the normative, institutional and practical aspects of these processes are extremely important for the development of legal and economic science.

Interdisciplinarity, international author teams and the topicality of the topics confirm the constant relevance of the journal in the academic space, and the received papers reflect both theoretical efforts and the practical applicability of the results in contemporary regulatory and business environments.

We thank all the authors, reviewers and collaborators for their contribution to this issue, and we invite readers to find in the published works an incentive for their own reflection, research and contribution to the development of scientific thought.

Wishing you all a pleasant summer!

Warm regards,

Prof. Hana Horak, PhD
