11001 Beograd, P.O.Box 522, Yugoslavia**

## F o r w a r d

The Sixth Yugoslav Symposium on the Physics of Condensed Matter was held in Kruševac, September 17 - 22, 1978. This kind of conference has become a biannual meeting of Yugoslav physicists concerned with various aspects of the condensed matter physics and its applications. The Symposium Proceedings contain invited and contributed papers which were presented and discussed at the Symposium. Afterwards, the papers were refereed in accordance with the standard procedure of the Fizika, which is a novelty of such a symposium. The Organizing Committee hopes that this kind of selecting papers will be adopted in all similar occasions.

The Symposium was convened by the Organizing Committee and it was realized by the Laboratory of Solid State Physics and Radiation Chemistry of the "Boris Kidrič" Institute of Nuclear Sciences, Beograd. It was financially supported mostly by the Serbian Community of Interest for Science and partly by the above mentioned Laboratory. The cordial hospitality of the Municipality of Kruševac is acknowledged.
