Dear Colleagues and Members of the IAPO

Welcome to the first edition of *Bulletin of the International Association for Paleodontology*. It has been my pleasure to co-ordinate the production of this 1st IAPO Bulletin as the Executive Board attempts to keep you more directly informed about IAPO activities. It is our intention to publish at least two issues per year. This bulletin is dedicated to the people from scientific and non-scientific community interested in paleodontology and bioarchaeology. It presents the most important developments in research and covers news, events, projects and their results.

Bulletin of the IAPO is interested in receiving texts, news or events linked to IAPO activities, paleodontology and bioarchaeology. Please submit your information to: bulletin@paleodontology.com. Thank you.

In this issue we feature our association news along with information about new book related to this area, forthcoming events, educational texts, etc. Our member from Spain – Leyre Prado Simon was involved in the fieldwork in Atapuerca, Spain when the million-year-old human tooth was found. She wrote an interesting report about this excavation and the oldest human fossil remain found in western Europe. ■

Marin Vodanović

Editor in Chief
