

## From the Editor

Dear readers,

I am happy to present you a new issue of the Journal of Information and Organizational Sciences, volume 33, number 1.

JIOS is being increasingly seen as a relevant journal in the field of information sciences and applied information and communication technology. Speaking in favour of this statement is the fact that JIOS has been included into several new databases – DOAJ (Directory of Open Access Journals), OAIster and Referativny Žurnal – which is information of interest to all our future authors. At present, we are cited in 7 different databases, which significantly enhances the visibility of the Journal.

In this issue a selection of 9 original scientific papers, 3 preliminary communication articles and 1 review paper has been included, all of which have undergone rigorous double-blind review. Some of the papers published here were already presented at the CECIIS 2008 conference. The papers in the current issue cover a broad area of topics, from programming and web related topics, through algorithm and method proposals, to economics and applied linguistics. We hope you will find the papers interesting and challenging for your own research.

We encourage you to submit your papers at [www.jios.foi.hr](http://www.jios.foi.hr), where you can also share with us your recommendations, comments or critical remarks regarding the papers published in previous issues. Your papers and feedback may prove invaluable in fulfilling our ambitions, which are very high indeed, as we have set out to enter some new databases. We would also appreciate your willingness to become a peer-reviewer for submitted papers, and thus give your contribution to the rising quality of JIOS.

Neven Vrčec
