**THE PRODUCTIVE INTERRELATIONSHIPS OF ETHNOGRAPHY, ETHNOLOGY,
HISTORY AND DEMOGRAPHY**

Summary

Considering the interrelationships between ethnography, ethnology, history and demography, the autor calls for research in the field of historical demography in Yugoslavia. There exist significant archives of data for such a study, i.e. for a reconstruction of long-term data on births, marriages and deaths, and it is possible to develop, from an ethnological perspective, a general picture of the conditions of human life in various cultural and sociopolitical circumstances. Research in the field of historical demography can complete, in an essential way, our ethnographic knowledge and improve our ethnological understanding.
