Fig. S1. Effect of: a) temperature, b) pH and c) agitation speed on β -fructofuranosidase production by *Aspergillus carbonarius* PC-4 under submerged conditions. Culture conditions: effect of temperature and pH was measured for 72 h, while agitation speed experiments were carried out under optimized conditions for 120 h of cultivation

Table S1. Fermentation parameters of β -fructofuranosidase production by *Aspergillus carbonarius* PC-4 under different cultivation conditions
