

About the Journal

The Journal Tehnički glasnik - Technical Journal (TG-TJ) established in 2007 with the aim of publishing scientific and professional papers in the area of mechanical, electrical and civil engineering as well as their boundary areas. TG-TJ welcomes submissions in any of the four categories (1) Original Scientific Papers, (2) Preliminary Notes, (3) Subject Reviews, and (4) Professional Papers.

Original scientific papers should report about original theoretical or practical research results. The given data must be sufficient in order to enable the experiment to be repeated with all effects described by the author, measurement results, or theoretical calculations.

Preliminary notes (Preliminary communication) present one or more new scientific results but without details that allow the reported data to be checked. The papers of this category inform about experimental research, small research projects, or progress reports that are of interest.

Subject reviews (Review papers) cover the state-of-art and tendencies in the development of a specific theory, technology and application with given remarks by the author. Such a paper ends with a list of references with all the necessary items in the related field.

Professional papers report on the original design of an instrument, device, or equipment not necessarily resulting from the original research. The paper contributes to the application of well-known scientific results and to their adaptation for practical use.

The author should propose and argument the category of the submitted article. Papers presented at scientific conferences can also be published in the Journal upon the agreement of the conference organizer and the author.

The submitted paper should not have been previously published elsewhere in the same or similar form and may not simultaneously be submitted to another Journal for publication. The author is the only one responsible for the contents, data reliability and all the statements in the paper.

The author warrants that the article is original, written by the stated author/s, had not been published before and will not be submitted anywhere else for publication prior to acceptance/rejection by the Journal TG-TJ, contains no unlawful statements, does not infringe the rights of others, and that any necessary written permissions to quote from other sources have been obtained by the author/s.

Papers to be published in the Journal TG-TJ, should be written in British English. The metrology and terminology used in the paper have to meet legal regulations, standards and International System of Units (SI) (Quantities and Units: ISO 80 000 - from Part 1 to Part 14).

The Journal TG-TJ does not require authors to assign copyright of their published original research papers to the Journal. Articles are published under a CC BY license (Creative Commons Attribution 4.0 International License). The CC BY license allows for maximum dissemination and re-use of open access materials and is preferred by many research funding bodies. Under this license users are free to share (copy, distribute and transmit) and remix (adapt) the contribution including for commercial purposes, providing they attribute the contribution in the manner specified by the author or licensor (read full legal code).

Editorial Summary

The manuscript for this Journal should be prepared in line with the submission guidelines of TG-TJ. Any manuscript submitted to our Journal must not have already been published in another Journal or be under consideration by any other Journal. Thus, all papers submitted to the Journal must be original contributions

and should not be under consideration for publication in another Journal simultaneously. The manuscripts of papers presented at conferences can be submitted unless they have been published as part of the conference proceedings in a peer reviewed Journal. The authors are required to ensure that no material submitted as part of the manuscript infringes the existing copyrights, or the rights of a third party.

TG-TJ follows double blind review with respect to contributors and reviewers; however, it is possible that a reviewer may have seen an earlier version of the research in the form of a conference paper, a paper presented at a research seminar, or a working paper. The Editorial Board is aware of author/s' identity.

- Number of Reviewers: Most often two but sometimes more independent reviewers
- Average Time Required for Review: It depends from case to case. As we have already mentioned, most papers will be reviewed by two or more independent reviewers. They may also be read and considered by the members of the Journal's Editorial Board and ultimately by the editor(s) before a decision is rendered. The reviewers are academics or professionals working in the field and also writing papers themselves. They offer their time and their expertise voluntarily in order to assist in the improvement of papers and to encourage new research in their topic of interest. Delays will inevitably occur when reviewers are busy. They may have a number of journals sending them papers to be reviewed. Our Journal may also receive high levels of submissions throughout the year. The Editorial Board of our Journal work tirelessly to ensure that peer review is as timely and rigorous as possible. Waiting times can vary, depending on the subject area.
- Fast track publishing: Sometimes is possible
- Reviewers' Comments to Authors: Yes, through the Editor-in-Chief
- Ultimate decision-maker: The Editor-in-Chief
- Payment: At the moment we publish without payment.
