

right-hand corner of each page. The text of the professional or scientific manuscript should be divided into sections: Title page, Abstract and Key words, Introduction, Methods, Results, Discussion, Acknowledgment, Conflict of interest statement, References, Tables, Legends and Figures. Scientific and Professional manuscripts, as well as Reviews should not be longer than 18 pages (including Tables and Figures). Case reports and Letters to the editor should not be longer than 10 pages (including Tables and Figures).

The title page should carry: the title of the article (which should be concise but informative) and a short running title of the manuscript; full name of author(s), with academic degree(s) and institutional affiliation; the name and address of the author responsible for correspondence about the manuscript including his/her E-mail address.

### **ABSTRACT AND KEY WORDS**

The second page should carry an abstract (of no more than 300 words). The abstract should state the purposes of the study or investigation, basic procedures, main findings, and the principal conclusions. It should emphasize new and important aspects of the study or observations. Below the abstract authors should provide 3 to 10 key words or short phrases that will assist indexers in cross-indexing the article and may be published with the abstract. Terms from the Medical Subject Headings (MeSH) list of Index Medicus should be used for key words.

### **INTRODUCTION**

State the purpose of the article and summarize the rationale for the study or observation. Give only strictly relevant references and do not include data or conclusions from the work being reported.

### **METHODS**

Describe selection and identify all important characteristics of the observational or experimental subjects or laboratory animals clearly. Specify carefully what the descriptors mean, and explain how the data were collected. Identify the methods, apparatus with the manufacturer's name and address in parentheses, and procedures in sufficient detail to allow other workers to reproduce the results. Provide references to established methods and statistical methods used. Describe new or substantially modified methods, give reasons for using them, and evaluate their limitations. Identify precisely all drugs and chemicals used. Use only generic name of drugs. All measurements should be expressed in SI units.

### **ETHICS**

Papers dealing with experiments on human subjects should clearly indicate that the procedures followed were in accordance with the ethical standards of the institutional or regional responsible committee on human experimentation and with the Helsinki Declaration of 1975, as revised in 1983. Never use patients' names especially in illustrative material. Papers dealing with experiments on animals should indicate that the institution's or a national research council's guide for the care and use of laboratory animals was followed.

### **STATISTICS**

Describe statistical methods with enough detail to enable a knowledgeable reader with access to the original data to verify the reported results. Whenever possible, quantify findings and present them with appropriate indicators of measurement error or uncertainty. Specify any general-use computer programmes used.

### **RESULTS**

Present your results in logical sequence in the text, tables, and illustrations. Do not repeat in the text all the data in the tables or illustrations; emphasize or summarize only important observations.
