

## **Ethics Statement**

Since its founding in 1993, International Journal for Engineering Modelling has committed itself to publish the highest quality while adhering to the strictest ethical standards.

International Journal for Engineering Modelling follows the principles of transparency, academic integrity and fairness. These principles are ensured through open access, financial independence, double-blind manuscript review, expert editors, research manuscript authentication, prevention of plagiarism and content archiving.

Ethical principles are binding on authors, editors, and reviewers.

## **Authors**

The author is considered a person who made a significant contribution to the concept or design of the work and assumed responsibility for the content of the entire paper. Submission of the manuscript for publication implies that all authors who contributed intellectually to the work were listed as authors and that everyone gave their consent for its publication. The authorship of the work must be clearly stated.

The author guarantees that his work has not been previously printed or is under consideration for publication in another publication. Submitting the same manuscript to more than one journal at the same time constitutes unethical publishing behavior and is unacceptable.

Authors of scientific papers must present the results and scientific contributions of their work accurately and objectively.

Authors must guarantee that their work strictly follows the rules of scientific methodology, substantiated with appropriate literature, properly cited.

If an author discovers a material error or inaccuracy in his or her published work, it is his responsibility to immediately notify the editor of the journal or publisher and cooperate with the editor to publish an erratum or supplement or correction.

Author guarantees that the submitted work is completely original and accepts any necessary authentication that the manuscript will need to undergo during the evaluation or publication process.

All authors submitting articles to journal are expected to abide by ethical standards and abstain from plagiarism, in any form.

By submitting the manuscript, the authors confirm that the submitted manuscript does not violate copyright rules.

It is the responsibility of the authors to ensure that there are no potential conflicts of interest in their work that could affect the results or interpretation.

The author should clearly indicate in the manuscript if the work involves the use of chemicals, the processes or equipment whose use is hazardous, and ensure that any research involving humans or

animals is in accordance with national, local, and institutional laws and regulations. Authors should seek explicit permission for research conducted on humans and respect their privacy.

## **Editors**

The editor must provide an objective review of all papers published in the journal.

The editor ensures that each manuscript received is evaluated according to the scientific quality of the content and the level of linguistic expression, and not according to the criteria of race, gender, gender, sexual orientation, religious and cultural beliefs, nationality, language, citizenship, party affiliation, etc.

The editor follows the principles regarding the protection of honor and reputation, copyright infringement, and plagiarism.

The editor may not submit information about the manuscript received to anyone other than the author, reviewers, possible reviewers, assistant editors, and, where appropriate, the publisher.

The editor must ensure the confidentiality of information or ideas obtained through reviews, prevent their misuse.

In the case of ethical complaints or conflicts, the editor will follow the rules of the journal and allow authors the opportunity to comment on all complaints. All complaints should be investigated regardless of when the original publication was approved for print. The documentation relating to complaints should be preserved.

## **Reviewers**

Reviewers are aware of the confidentiality of the review process and any information provided by the editor or author.

Reviewer critically evaluates the structure, validity of the applied methodology, the argumentative content of the manuscript, and the author's authentic contribution to the topic being researched in relation to sources that benefit.

Reviewers should clearly and reasonably express their views.

Reviews should be conducted objectively.

Reviewers should identify and alert the editor to any relevant published or submitted content that is substantially similar or overlaps with the content of the peer-reviewed manuscript that has not been cited by the authors.

Reviewers may not consider manuscripts in relation to which they are in conflict of interest.

## Peer Review

It is preferable that all manuscripts, submitted on [engmod@gradst.hr](mailto:engmod@gradst.hr), are prepared using the Article template and Guidelines for authors. All received manuscripts are considered by the Editorial Board about their fitting into the journal's aims and scopes. Each manuscript is run through plagiarism detection software to verify the originality. After the initial evaluation, acceptable manuscripts are passed on to at least 2 experts for review with an additional document named Paper Review Form. Journal employs double-blind reviewing, where the reviewers and author remain anonymous throughout the process. The revised version is evaluated by the reviewers and the Editor-in-Chief brings a decision about final acceptance based on their suggestions. Manuscripts accepted for publication are technically edited and linguistically inspected. The version of the manuscript that is prepared for publication is sent to the authors for proofreading together with the Author's Statement about the originality of the paper and publishing ethics.

The papers deposited in CrossRef with the assigned DOI numbers are published online (<http://gradst.unist.hr/eng/other/publishing/engineering-modelling>, <https://hrcak.srce.hr/ijem?lang=en>), and in the print version without any fees. If an author discovers a material error or inaccuracy in published work, an Erratum will be published in the first available issue and posted online. If the authors discover the major flaws in their work, they can retract the paper. The online version will then be marked as 'retracted by authors' and a retraction notice will be added to the CrossRef database. All links to the retracted article will be maintained.

Researchers, reviewers, readers or editors of other journals are encouraged to contact the Editorial Office ([engmod@gradst.hr](mailto:engmod@gradst.hr)) in case of suspected misconduct, such as: breaching ethical norms, a redundant or duplicate submission, plagiarism, self-plagiarism, etc.

## Copyright

International Journal for Engineering Modelling is an Open Access journal. All content is immediately and freely available to anyone, anywhere. Journal does not charge either article processing charges (APCs) or article submission charges. The author(s) hold the copyright and retain publishing rights without restrictions. Users are allowed to read, download, copy, redistribute, print, search and link to material, and alter, transform, or build upon the material, or use them for any other lawful purpose as long as they attribute the source in an appropriate manner according to the CC BY license.. Copyright of published papers is retained by the authors, who grant the publisher license to publish the manuscript as the original publisher. If the content of the published manuscripts is copied, downloaded, or otherwise reused for non-commercial research and educational purposes, a link to the appropriate bibliographic citation (authors, journal title, manuscript title, volume, year and page numbers, and the link to the published version on the Journal's website should be provided. For any unofficial translation of the manuscript, a statement that it is an unofficial translation of the article must accompany the text.

## **Plagiarism**

Plagiarism represents the violation of copyright law. Plagiarism, including duplicate publication of the author's own work, in whole or in part without proper citation is not tolerated by the journal. The International Journal for Engineering Modelling is strictly against any unethical act of copying or plagiarism in any form. Journal respects intellectual property and aims at protecting and promoting the original work of its authors. Manuscripts containing plagiarized material are against the standards of quality, research, and innovation. All authors submitting articles to journals are expected to abide by ethical standards and abstain from plagiarism, in any form. All the submitted manuscripts for publication are checked for plagiarism after submission and before starting review. In accordance with publishing integrity, the journal uses plagiarism detection software.
