

Publication ethics:

Publication and authorship

The submitted manuscript should be solely considered by the journal and should not be previously published or submitted simultaneously to another journal.

Authors should sign a copyright form stating that the article is an original work, has not been published before and is not being considered for publication elsewhere.

Author's responsibilities

Authors should have substantial contributions to conception and design, and/or acquisition of data, and/or analysis and interpretation of data.

Authors are responsible for obtaining any permissions and copyrights (e.g. picture permits, data use permits and other types of permits, if applicable).

Authors should participate in drafting the manuscript or revising it critically for important intellectual content

The corresponding author should be actively contribute with the journal editorial office for any queries regarding the submitted manuscript and should respond the journal's mails as soon as possible

The authors should confirm the authenticity of the provided data

Peer review/responsibility for the reviewers

Reviewers should assess the originality, scientific merit, design of the study including statistical analysis, professional interest and the overall quality of the manuscript

Reviewers should provide constructive comments to improve the quality of the article

Reviewers should have no conflict of interest with respect to the research, the authors and/or the research funders

All reviews should be performed confidentially

Editorial responsibilities

The Editor-in-Chief have complete responsibility and authority to reject/accept an article

Editors are responsible for the contents and overall quality of the publication

Editors should publish errata pages or make corrections when needed

Editors should preserve the anonymity of reviewers

Editors should not reject papers based on suspicions; they should have proof of misconduct

Editors should not allow any conflicts of interest between staff, authors, reviewers and board members

Publishing ethics issues

The main responsibility of a research ethics is to protect potential participants in the research, but it must also take into account potential risks and benefits for the community in which the research will be carried out. Its ultimate goal is to promote high ethical standards in research for health.

Publication ethical violations including duplication, fabrication, falsification and plagiarism are strictly prohibited

Papers are checked for plagiarism (including self-plagiarism). If any of these publication ethics violations are detected, action will be taken following the COPE guidelines

Manuscripts must comply with the ethical standards recommended by the Helsinki Declaration

The corresponding author must affirm that all co-investigators have been duly credited in the manuscript either as co-authors or in the acknowledgement section

It is necessary to have taken a significant part in the overall conception and design of the research or to have participated in the acquisition, analysis and interpretation of data as well as having written initial drafts of the manuscript, revised and contributed to the final manuscript
