

Publishing Ethics

MemorabiLika, an interdisciplinary scientific journal established in 2018, publishes papers on the Lika region's history, culture, language, literature, and geography. It is intended for scientists, researchers, and professionals engaged in local history, literature, culture, and ethnography, as well as readers interested in the Lika region issues.

MemorabiLika is an annual serial publication available in print and electronic form. It welcomes various submissions, including scientific papers, archival materials, finding aids, literature reviews, conference proceedings, and any contributions that shed light on the Lika region's history, geography, and culture.

Given its importance in Croatian scientific publishing, the journal adheres to fundamental ethical principles and scientific and professional work standards. This commitment is reflected through several core practices: publicly available information and open access publishing, double-anonymous peer review, clear guidelines on authorship and terms for intellectual property use, the authenticity of scientific manuscripts and preventing plagiarism.

To ensure adherence to best practices and maintain the journal's high standards, editors and reviewers attend continuous education on the latest guidelines, recommendations, and examples in review processes and journal management. They also systematically follow research in scientific publishing to stay informed in this evolving field.

Editorial Policy

Authors should carefully read the author guidelines before submitting a manuscript. The editorial board makes impartial and objective decisions regarding accepting submitted manuscripts and alerts authors to relevant copyright laws. The editorial board ensures confidentiality and qualified peer review of all published content. Reviewers' feedback is fair, constructive, clear, and provided promptly to authors.

Reviews

The journal only accepts unpublished manuscripts. Each submitted manuscript is evaluated based on criteria of originality and quality of scientific and professional content. Suppose a reviewer feels unqualified to assess the manuscript due to a lack of expertise or cannot complete the review promptly. In that case, they are obligated to inform the editorial board and withdraw from the review process. Manuscripts undergo authenticity checking to ensure the originality of the research presented. Before publication, they are sent to a proofreader for final editing to correct spelling and grammar errors and to resolve ambiguities and inconsistencies. Any inaccuracies and questions arising during this editing stage are resolved in collaboration with the author. The final version of the manuscript is then sent to the author for verification and approval.

Confidentiality

The editorial board treats all submitted manuscripts with strict confidentiality. Except for reviewers directly involved in the evaluation process, the board does not disclose confidential

information to third parties. This policy applies unless there are well-founded suspicions of misconduct. Reviewers must also handle manuscripts confidentially and not use them without authorization. The editorial board takes all necessary steps to protect reviewer's identity.

Copyright

The published manuscript can be used, distributed, and reproduced in any lawful medium, provided proper attribution is given by the CC BY 4.0 license. Copyright to the published manuscript remains with the authors or copyright holders. The published content is then made freely available for non-commercial use by third parties, provided they maintain its integrity and acknowledge the original authors, citation details, and publisher. Individual users may access, download, copy, display, adapt, and translate the manuscript, ensuring that the authors' intellectual and moral rights, reputation, and integrity are not compromised.

Ethics

It is essential to avoid any conflicts of interest, whether financial, academic, family, or otherwise, within the relations involving editors, editorial board, reviewers, and authors. All authors are required to submit a signed statement confirming their authorship and responsibility for the manuscript. Before agreeing to review a manuscript, reviewers must disclose any potential conflicts, including collaborations, involvement with the manuscript, personal disputes, financial ties, or any non-financial concerns that could influence their judgment. If editorial board members submit manuscripts as authors, reviewers are carefully selected to mitigate potential bias during the review process.

The editorial board's decisions regarding manuscript acceptance or rejection are based solely on its significance, originality, clarity, validity of research, and relevance to the journal's field. These decisions are made without regard to the author's gender, sexual orientation, religious beliefs, nationality, citizenship, political views, or similar factors.

Unpublished materials disclosed within a submitted manuscript must not be used for the editors' or reviewers' research without obtaining the author's prior written consent.

Misconduct in Manuscript Submission

Authors are solely responsible for the originality and content of their manuscripts. They guarantee that the work is their own and that all sources are referenced correctly. Simultaneous submission of the same manuscript to multiple journals constitutes unethical conduct and is strictly prohibited. Editors will take appropriate action upon suspicion or notification of scientific misconduct by authors or reviewers, regardless of whether the work is published or not.
