## Publication ethics and publication malpractice

*Thesis* is an international interdisciplinary academic journal which is dedicated to the open exchange of information. Therefore, *Thesis* is an open access journal. Copies and/or articles in this journal are allowed to be shared for research and/or educational purposes free of charge and permission under a [Creative Commons Attribution-NoDerivatives 4.0 International License](#) is not mandatory.

Submission of an article implies that the work described has not been published before and that it is not under consideration for publication elsewhere.

### **Editorial/Editor-in-Chief duties**

- Review of manuscripts: *Thesis* uses double-blind peer review, which implies that the reviewer does not know the identity of the author, nor does the author know who the evaluator of his/her scientific work was. *Thesis* collaborates with both local and international reviewers who are experts in their field.
- The reviewers evaluate the work based on the originality of the *Thesis*, the depth of argumentation, the importance of the problem they are dealing with, the relevant resources they use and the importance of treating such a *Thesis* topic in accordance with its aims and scope.
- The editorial board and editor-in-chief ensure that reviewers do their job correctly, without prejudice to gender, religion, race, background, orientation, citizenship, etc.
- Reviewers should provide an evaluation and response to the manuscript within a reasonable time of less than three months.
- The editorial reviews which the editor-in-chief receives are confidential and are only sent to the authors of the work, maintaining anonymity between the two parties.

- The editor-in-chief must correctly prove that there is no conflict of interest arising from competing, financial, collaborative relationships, etc. with the authors of any of the published or rejected articles.
- The editor-in-chief is responsible for the content of the journal and ensures the integrity of articles published in Thesis. They have the right to make the final decision to publish or not to publish a manuscript, relying on its significance, relevance, originality, clarity and relevance to Thesis Journal, with the intent to continually enhance the quality of the journal while respecting the components of the magazine (readers, authors, reviewers, and editorial staff).

### ***Duties of Authors:***

#### Originality:

Every author and co-author must prove that his article is original. The article should provide an accurate summary of the work done, as well as an objective discussion of the significance of scientific work. Basic data should be presented accurately. Misleading or inaccurate statements constitute unethical behavior and are unacceptable. The author must prove that the article submitted for publication in Thesis has not been previously published, nor is it in the process of being published in any other journal.

#### Unacceptable behavior:

- Fabrication, forgery, fraud: the creation of false data or other aspects of scientific research, including documentation and consent of participants;
- Inappropriate manipulation or selection of data, images, quotations of others, or any other type of fraudulent conduct;
- Plagiarism: This involves copying or abusing ideas, text, software, or data / results or any combination thereof, without proper permission and quotation. Researchers are strongly encouraged to agree in advance with any co-author or contributor to the study;
- Self-plagiarism (the presentation of a previously published work as if it were new). This is considered misconduct if it involves superficial reworking and updating of the material while introducing it as a completely new scientific product;
- Misrepresentation of data / results by negligence or otherwise;
- Duplication of publication, including undisclosed copies when submitting manuscripts for publication;

- Non-disclosure of conflict of interest, including non-disclosure of material, research interests or research funding (failure to disclose the fact that the research is funded by any entity);
- Misrepresentation of scientific qualifications or experience;
- Misrepresentation of authorial involvement, such as inappropriate claims of authorship or denial of authorship or contribution.
- Any manuscript received by Thesis editorial office is treated as a confidential document. Reviewers should not share the review or information about working with anyone or contact the authors directly after publication when the peer review can understand the authorship of the manuscript. Unpublished materials from the magazine may not be used for any purpose by the editorial staff or peer reviewer.

Our ethic statements are based on COPE's Best Practice Guidelines for Journal Editors (<https://publicationethics.org/resources/guidelines>).

## Conflict of interests:

Authors should state in their manuscript any financial relationships with other people or organizations that may be seen as having an inappropriate influence (prejudice) on their work. The authors must write this statement in their manuscript or have received financial support from any entity.

## Post-publication discussions and corrections

When the author discovers any material inaccuracies or errors in his work, he should inform the editorial board of the journal to correct the error. In cases when the error is discovered after publication on paper, then the publisher in the next issue publishes a note as follows:

Corrigendum, is a statement issued by the publisher informing the reader that an article has been corrected after publication. These corrections may relate to the title, authors or anything else that has confused the full meaning of the article. Errors can be primarily technical through the fault of the author or publisher.

Erratum, is a statement by the authors of the paper, that briefly describes any correction resulting from errors or omissions.

Retraction, is a notice that the article should not be regarded as part of the scientific literature. The journal editors follow [COPE](#) guidelines on retraction.

## Copyright Policy

Copyright is retained by the authors of the articles published in Thesis. Articles are licensed under an open access **Creative Commons CC BY 4.0** license. This means that anyone may read and download the paper for free. In addition, the article may be reused and quoted provided that the original published version is cited. These conditions allow for maximum use and exposure of the work, while ensuring that the authors receive proper credit.

Submitting a paper and publishing it means that the article has not been published before and is not being considered for publication elsewhere.

The Journal and the editors are not responsible for any possible infringement of the existing copyright in the articles published in the Journal. The responsibility falls on the authors of those articles. The Journal or publisher are not responsible for subsequent uses of the work.

## Privacy Statement

The names and e-mail addresses of the authors owned by Thesis will only be used for the stated purposes of the press and will not be made available for any other purpose and will not be provided to a third party.
