

Correction and retraction policy

The authors are accountable for the accuracy of the published data. All corrections of data should be done before the publishing of the paper. For that reason, the authors receive the galley proof of the paper and are asked to review it carefully and correct it (if necessary) within three work days.

If, despite this, authors find a major error in the published version of the article, they can submit an *Erratum* to the Editorial board of the Krčki zbornik (Krk Almanac), which will then be published in the following printed issue and in the online version of that issue.

If the authors made an honest error or discover the major flaws in their work after its publication, they can retract the paper. The online version will then be marked as "*retracted by author/s*". The link to the retracted article will be maintained.

If the editors, reviewers or readers of the Krčki zbornik (Krk Almanac) notice a case of duplicate or overlapping publication, fraudulent use of data, plagiarism or unethical research, the paper will be, after an internal review by the Editorial board, retracted, in which case the online version will then be marked as "*retracted by editor*". The link to the retracted article will be maintained.

All retractions will be done in accordance with the [Committee on Publication Ethics \(COPE\)](#) retraction guidelines.
